DTS Staff Showcase Script and Storyboard

Taglish staff demonstration

A complete presenter and production guide for showing the current Document Tracking and Routing System from registration to release, with reporting, scheduling, administration and measured performance.

Master	Scenes	Capture beats	Alternate cut
32 minutes with demo holds	32	96	3 minutes

How to use this book

• Read only the Spoken narration aloud. Screen beats and presenter cues are production notes.

• Keep the same scene ID across this book, SCRIPT.md, storyboard.html and shot-list.csv.

• All 32 keyframes use authentic reference stills from a disposable stress-test copy. Record the indicated actions for the final video; stills illustrate framing and do not show every beat.

• The master has 3,279 spoken words, about 25 minutes at 130 words per minute. The rest of the schedule allows actions, reading results and role switches.

• For a live staff session, allow an additional 5-10 minutes for questions and guided practice.

Production defaults

1920x1080 landscape. Readable desktop browser scale. Warm instructional Taglish. Actual UI labels remain in English. Background music and any generated visual inserts are optional later production choices.

16 October 2026

Demonstration cast and preparation

Role	Enrolled person	Username
Admin Staff	Marian Grace Paling	mpaling
CMED Focal	Aubrey Camille C. Cabrera	acabrera
Staff	Danezel Christian G. Cruz	dcruz
Supervisor	Maria Urduja Jean V. Tabilas	mtabilas
CMED Division Manager	Myles Rovi P. Martinez	mmartinez
Department Manager	Oscar B. Hanova Jr.	ohanova
System Administrator	System Administrator	admin

• Use an approved disposable test copy. Wait for the stress launcher RESULT before manually editing its records.

• Prepare a hero document, a reassignment example, a return-to-sender example, one regional report and one generated Special Report.

• Use separate browser contexts or profiles for role recordings. Mask passwords and never show credential files.

• Check active references, current holidays, designated regional staff, manager presence and OIC configuration before filming.

• Keep the tracking number consistent in the ordinary lifecycle. Prepare independent takes for historical and deadline examples.

• Record with selected period, division and filter labels visible. Restore any changed test configuration after each exceptional-path demonstration.

Chapter map and production direction

Chapter	Planned time	Scenes
Orientation	00:00-04:00	S01-S04
Finding work	04:00-06:00	S05-S06
Document lifecycle	06:00-14:00	S07-S14
Reports	14:00-18:00	S15-S18
Scheduling	18:00-19:00	S19-S19
Monitoring	19:00-22:00	S20-S22
Administration	22:00-29:00	S23-S29
Operations	29:00-31:00	S30-S31
Closing	31:00-32:00	S32-S32

Recording and editing

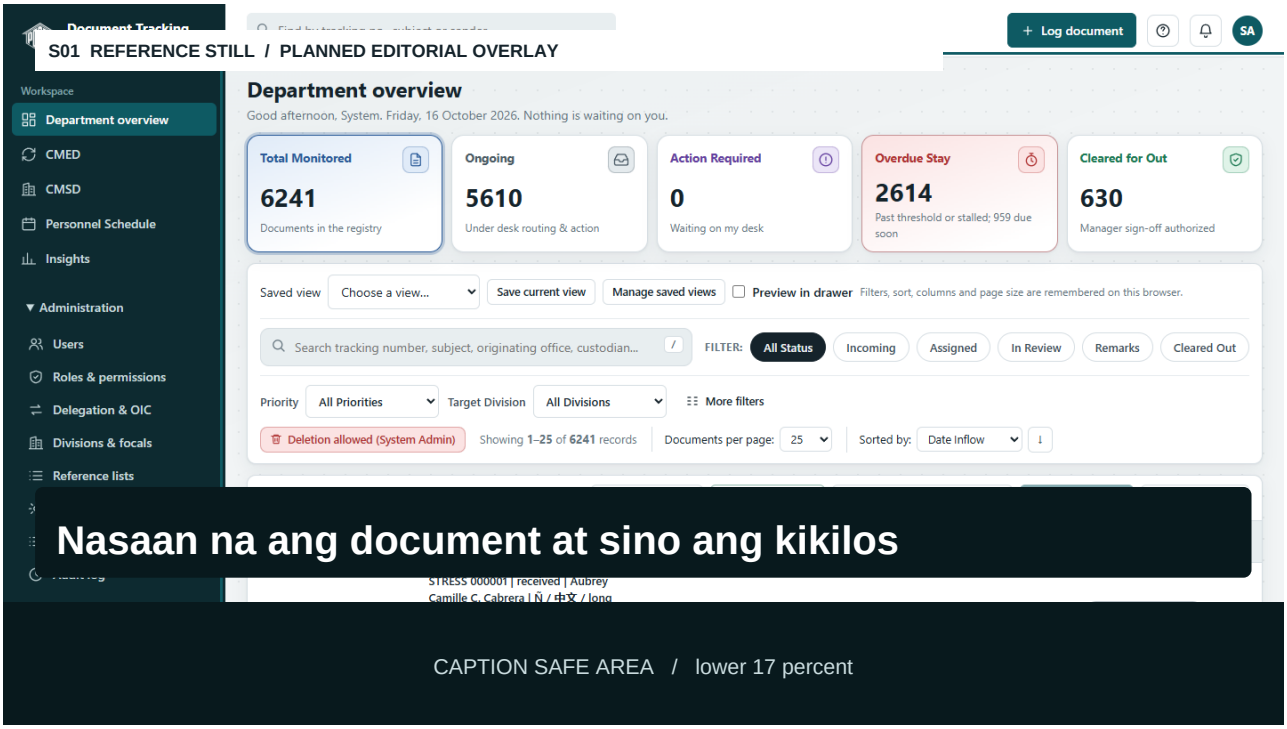

Use the same hero tracking-number callout through the document lifecycle. Hold every changed status for at least three seconds. End a scene on a completed action before the next account or module appears. Reserve the lower 17 percent for captions and avoid covering controls.

Factual boundaries

Clearance and release are separate. File URLs are external links. The Workflow Designer is drafting, publishing and simulation; live generic designer execution is not enabled. Department-wide viewing and division-destination permissions are distinct. Stress results describe one dated workload and machine.

S01 Ano ang kayang sagutin ng DTS

00:00-01:00 | Orientation | Presenter

Spoken narration

Kapag may nagtanong kung nasaan na ang isang document, ano ang una nating ginagawa? Hinahanap ba natin ang huling message, tumatawag sa ibang desk, o chine-check ang isang listahang hindi na updated?

Sa Document Tracking and Routing System, may isang record na susundan natin mula pagtanggap, assignment, processing at review, hanggang clearance at release. Makikita kung kanino ang current action at ano ang susunod na hakbang.

Sa demo na ito, actual screens at sample records ang gagamitin natin. Ipapakita rin ang regular reports, personnel schedules, monitoring tools at administrative controls na sumusuporta sa araw-araw na trabaho.

Matching screen beats

S01-1 Show the actual Department overview; hold a sample tracking number in an editorial callout.

S01-2 Highlight current desk, deadline and status on one sample record.

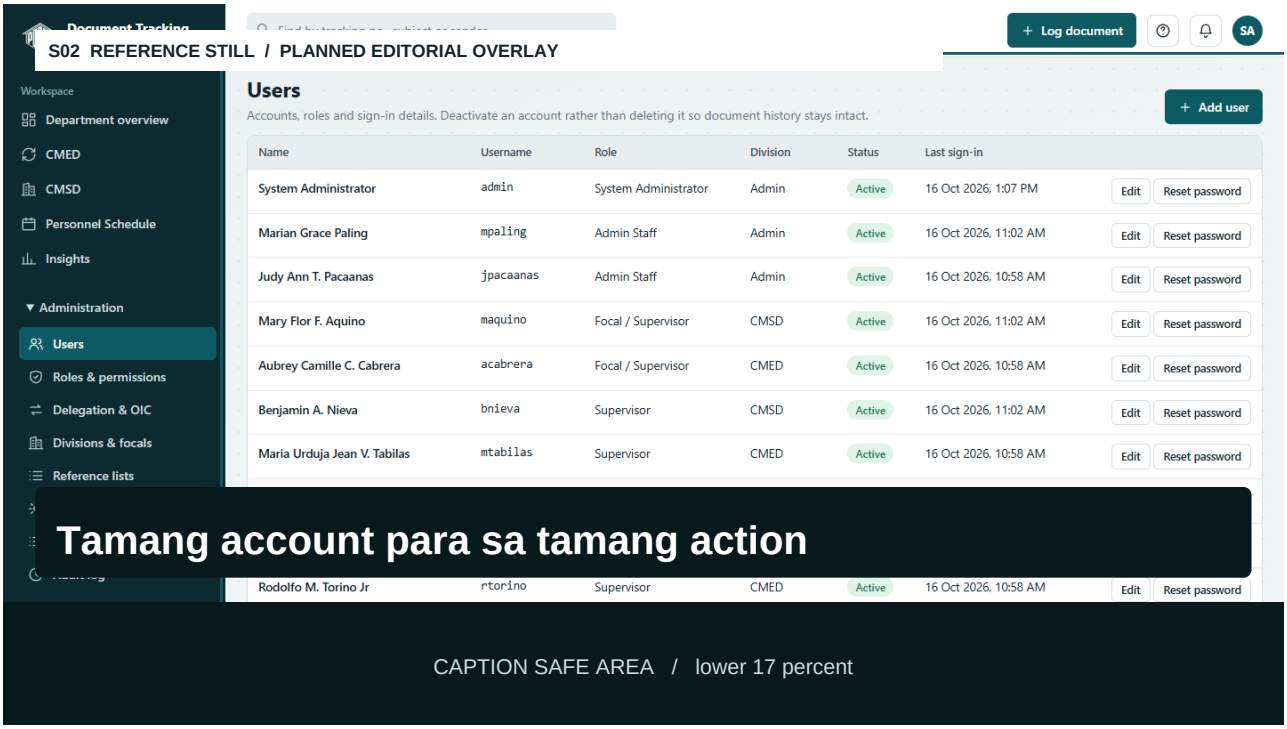

S01-3 Show the chapter roadmap; keep the same document identifier through the lifecycle scenes.

Presenter cue Use a clearly labelled demonstration record. Do not invent a reduced processing time or savings figure.

Evidence E01, E02, E03 | Route #/dashboard

S02 Sino ang gumagamit at ano ang responsibilidad

01:00-02:00 | Orientation | Presenter and role cast

Spoken narration

May magkakaibang responsibilidad ang bawat account. Ang Admin Staff ang nagla-log, nagfo-forward at nagre-record ng release. Ang Focal ang nag-aassign. Ang Staff ang nagpoproseso at nagsusumite ng output.

Ang Supervisor at Division Manager ang nagre-review sa kani-kanilang bahagi. Ang Department Manager ang nasa final review at clearance, kasama ang mga applicable acting at OIC rules.

Ang System Administrator naman ang namamahala sa accounts, permissions at configuration. Hindi ito ang regular processing account at wala itong My work queue. Gagamit tayo ng tamang enrolled account sa bawat operational step.

Matching screen beats

S02-1 Show seven role labels around the document; use verified enrolled names only in the cast panel.

S02-2 Trace the ordinary sequence Admin Staff to Focal to Staff to reviewers.

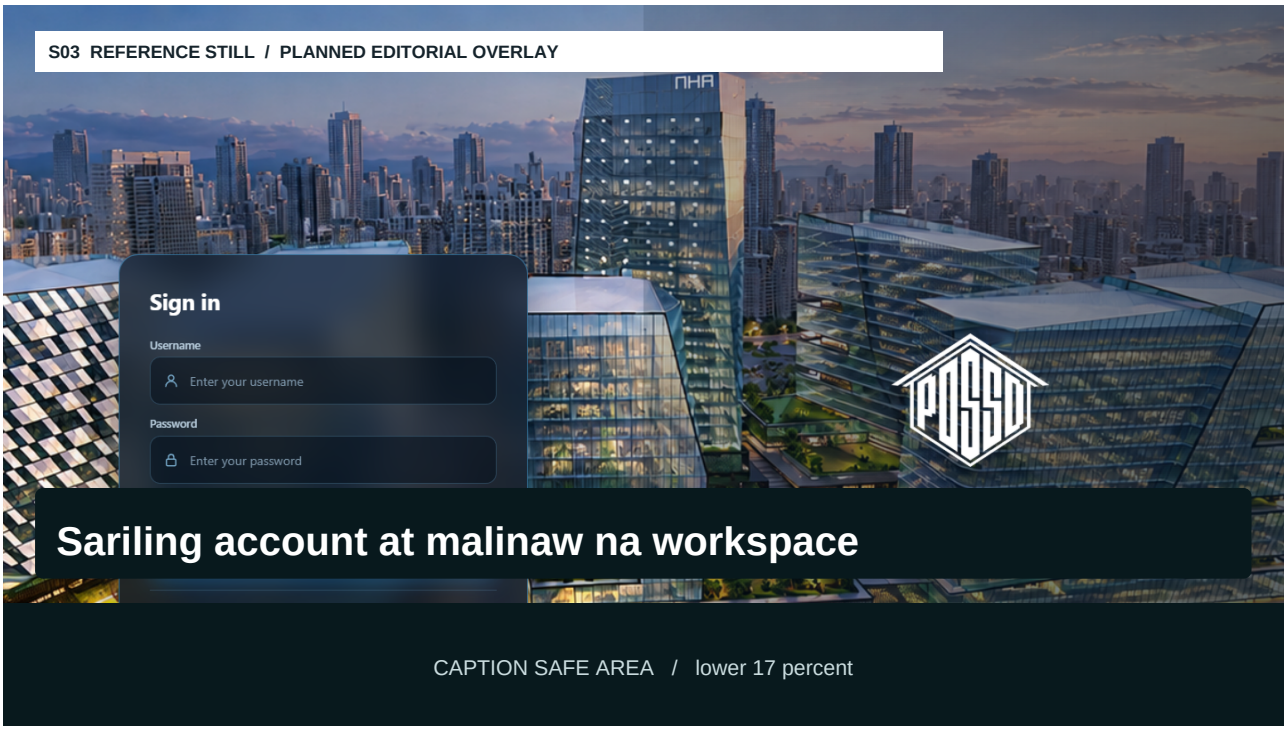

S02-3 Separate System Administrator from the operational chain.

Presenter cue Permissions and desk responsibility both matter. A configured focal also receives focal abilities even when their base role differs.

Evidence E01, E02, E10 | Route #/users

S03 Sign in at personal workspace

02:00-03:00 | Orientation | Any enrolled staff account

Spoken narration

Mag-sign in gamit ang sariling approved account. Kung temporary password ang ibinigay sa first use, sundin ang prompt para palitan ito. Huwag gumamit ng shared administrator account para sa normal na processing.

Pagkapasok, ang Staff ay karaniwang dadalhin sa My work. Ang administrators at managers ay sa Department overview. Kung may binuksang direct document link, puwedeng iyon ang unang destination.

Sa account menu, makikita ang personal options gaya ng password change, theme at sign out. Puwedeng pumili ng light, dark o automatic theme. Takpan ang password habang nire-record at huwag isama ang actual credentials sa final video.

Matching screen beats

S03-1 Capture splash to sign-in; type the approved demo account with password masked.

S03-2 Cut to staff My work, then a manager overview from a separate browser context.

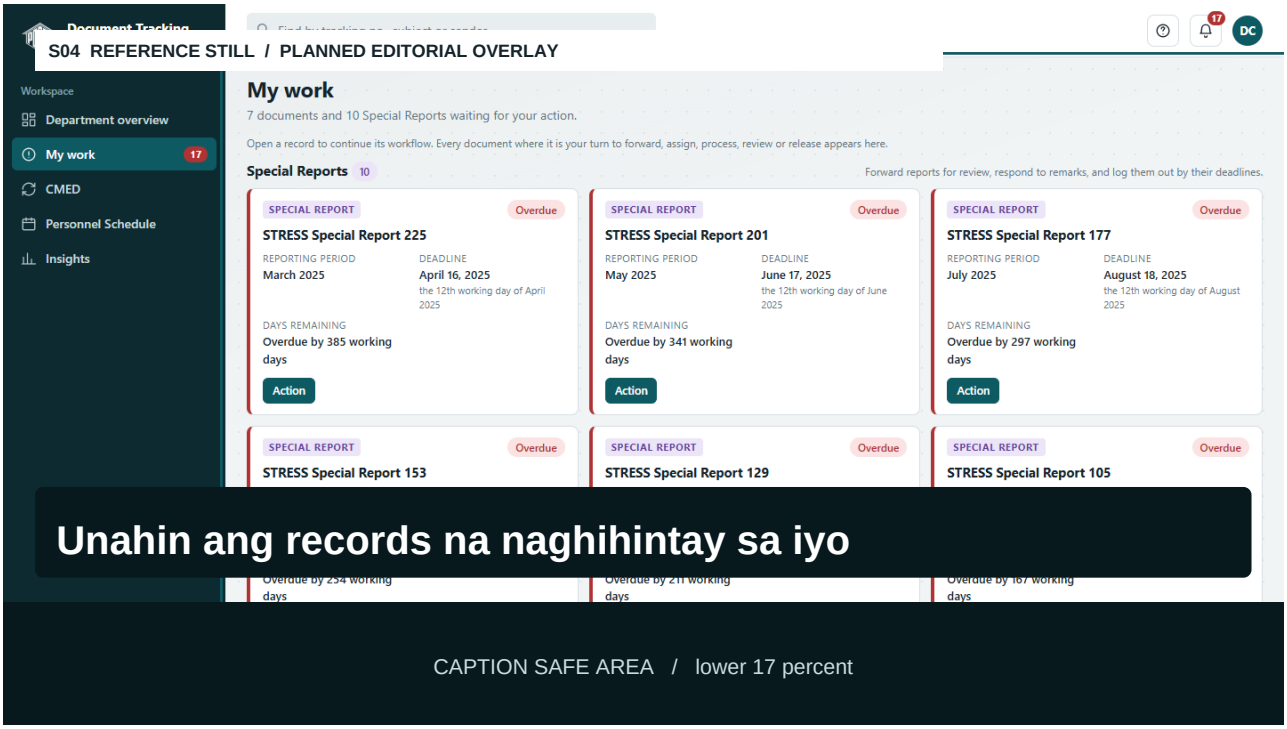

S03-3 Open the account menu and show theme choices and sign-out location.

Presenter cue Use a fresh test profile. Do not publish the stress password or initial-credentials file.

Evidence E02, E03, E08 | Route /

S04 Pagkilala sa navigation at My work

03:00-04:00 | Orientation | Staff and administrator comparison

Spoken narration

Ang sidebar ang mapa ng application. Nandito ang Department overview, My work kapag applicable, CMED, CMSD, Personnel Schedule, Insights at mga administration pages na pinapayagan sa account.

Sa My work, makikita ang ordinary documents at Special Reports na nangangailangan ng action mula sa naka-sign-in na user. Ang bilang sa queue ay para makatulong sa pag-prioritize, kaya tingnan din ang deadline at current stage.

May in-app action indicator at bell para sa pending work. Ang ibang pagbabago ay lumalabas sa live refresh, karaniwang sa loob ng humigit-kumulang fifteen seconds. Ipakita ang actual queue; huwag ilarawan itong email o text-message notification service.

Matching screen beats

S04-1 Pan through visible sidebar groups in the staff account.

S04-2 Open My work; point to an ordinary document and a Special Report action card.

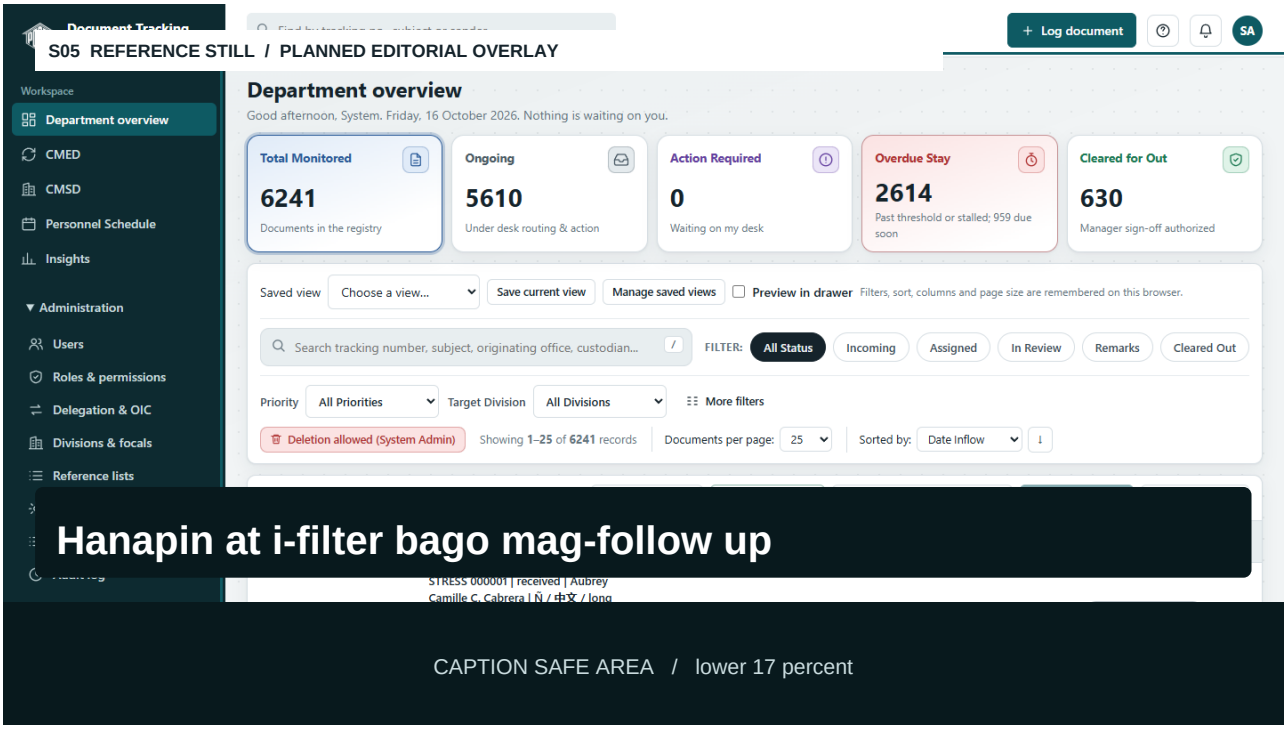

S04-3 Show the bell and a staged update from another account; allow time for refresh.

Presenter cue Open dialogs and unsaved forms can defer refresh. Keep the demonstration free of unsaved edits.

Evidence E02, E03, E04, E08 | Route #/action

S05 Department overview at paghahanap ng records

04:00-05:00 | Finding work | Admin Staff or manager

Spoken narration

Sa Department overview, puwedeng makita ang monitored documents, ongoing work, action required, Overdue Stay at cleared records. Ang mga tile ay filters na puwedeng piliin para mas mapaliit ang listahan.

Mag-search gamit ang tracking number, subject o originating office. Pagkatapos, gamitin ang division, priority at available advanced filters, saka ang sorting at pagination. Puwede ring pumili ng columns at mag-save ng sariling view.

Tandaan na ang Overdue Stay ay kasama ang overdue deadlines at applicable stalled desk records. Hindi lahat ng nandito ay pare-pareho ang dahilan ng delay. Buksan ang record para makita kung deadline ba o desk stay ang kailangang aksiyunan.

Matching screen beats

S05-1 Click total, ongoing and Overdue Stay tiles on the populated registry.

S05-2 Search the hero record; show More filters, sorting, columns and page controls.

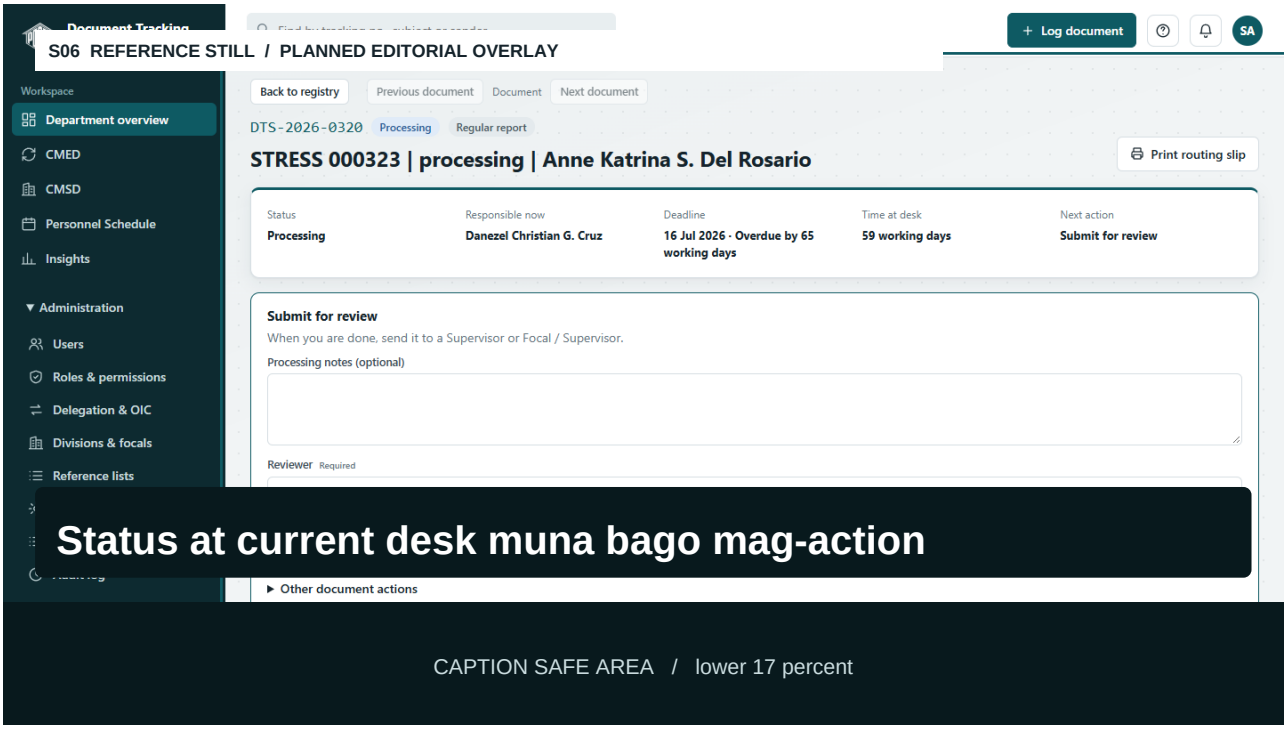

S05-3 Save a named view and reopen it; point to the distinct delay labels.

Presenter cue Saved views and registry preferences are per account and browser. Avoid claiming that they sync across devices.

Evidence E02, E03 | Route #/dashboard

S06 Preview at pagbabasa ng document details

05:00-06:00 | Finding work | Any signed-in user with applicable actions

Spoken narration

Kung gusto munang sumilip nang hindi iniiwan ang listahan, gamitin ang Preview in drawer. Makikita ang key details at available actions, at puwedeng lumipat sa previous o next record sa kasalukuyang queue.

Sa full document page, unahin ang status, responsible desk, deadline, desk age at next action. Nasa record din ang source, document type, division, priority at iba pang registration details.

Sa ibaba, tingnan ang Files and links, review comments at movement history. Ang history ang magpapakita kung ano ang nangyari at sino ang gumawa ng action. Kapag may tanong sa progress, dito tayo bumabalik sa halip na manghula mula sa title lang.

Matching screen beats

S06-1 Enable drawer preview and open the hero record from the registry.

S06-2 Highlight summary fields, then Open full document.

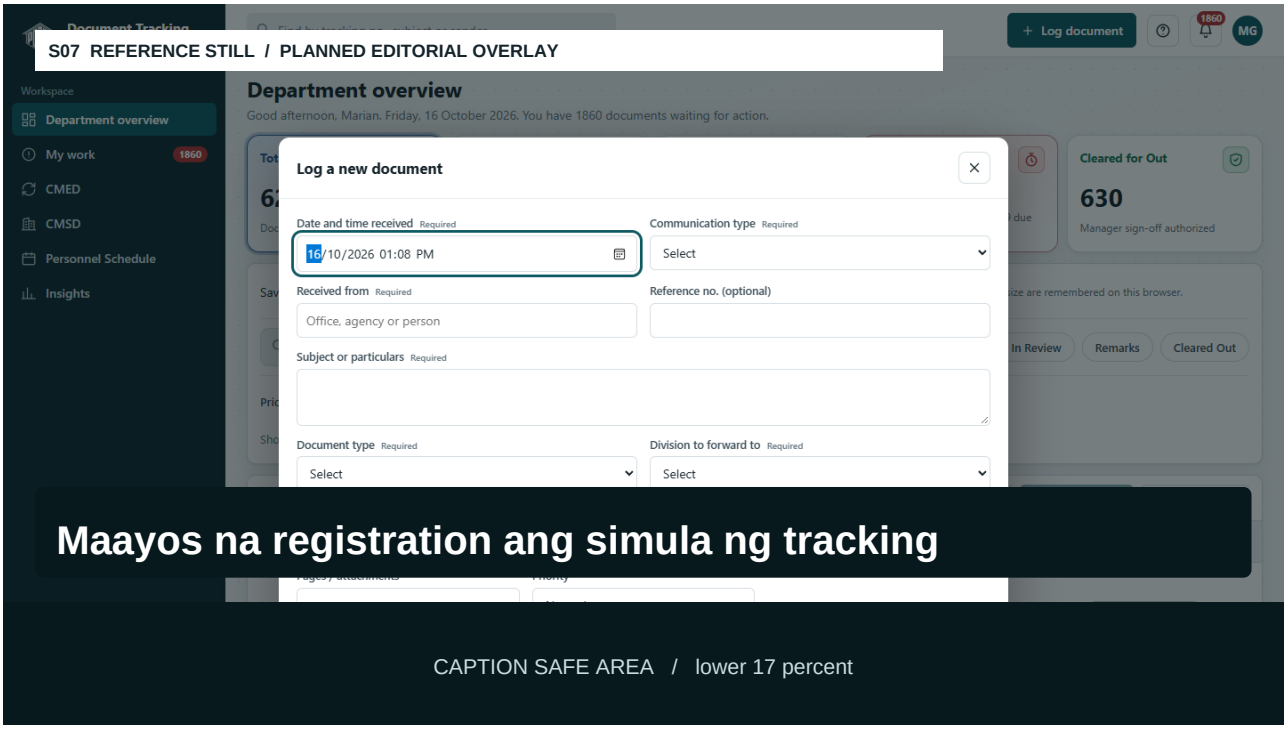

S06-3 Scroll to files, comments and history; return to the current action panel.

Presenter cue Some details are broadly viewable; an available view does not grant permission to perform every action.

Evidence E02, E03 | Route #/dashboard then #/doc/{id}

S07 Pag-log ng bagong document

06:00-07:00 | Document lifecycle | Marian Grace Paling / Admin Staff

Spoken narration

Magsimula tayo sa bagong ordinary document. Ilagay ang date received, communication type, received from, reference number at malinaw na subject. Piliin ang document type at target division, saka ang Normal o Urgent priority.

Kung may original document sa approved file storage, ilagay ang complete web link. Puwede ring maglagay ng pages at remarks. I-review muna ang details bago i-save; tutulungan ng validation na mahuli ang kulang o invalid na input.

May choice na i-save muna sa Admin desk o i-forward kung handa na. May generated tracking number ang record. Para sa ordinary assignment-based processing, ang simpleng registration pa lang ay hindi pa pagsisimula ng processing clock.

Matching screen beats

S07-1 Open New document as mpaling; enter a synthetic letter with a meaningful subject.

S07-2 Fill current active references and a safe demonstration file URL; show one required-field validation.

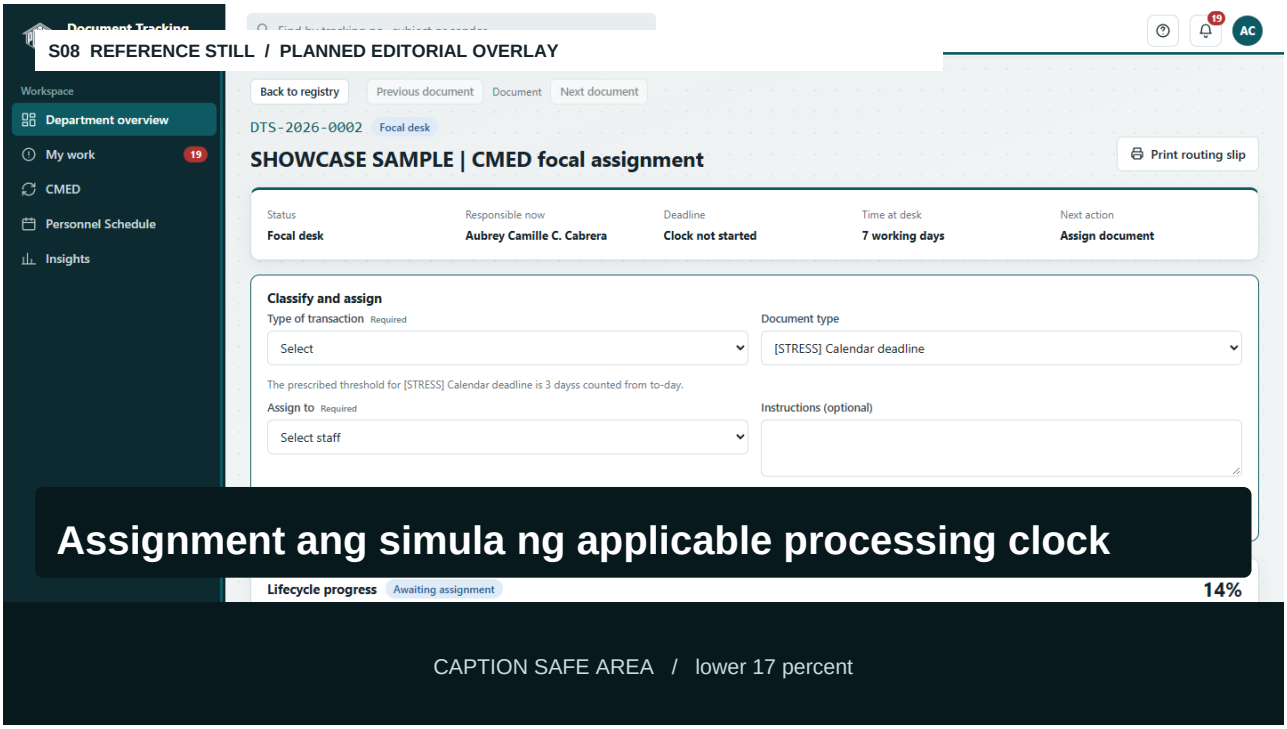

S07-3 Save without forwarding; show received status, generated tracking number and unstarted clock.

Presenter cue Hero record: DEMO Site inspection coordination request, CMED. Urgent is a label, not a separate automatic deadline rule.

Evidence E01, E02, E07 | Route New document form

S08 Forwarding at assignment ng Focal

07:00-08:00 | Document lifecycle | Admin Staff then Aubrey Camille C Cabrera / Focal

Spoken narration

Kapag kumpleto na ang intake details, i-forward ang ordinary document sa configured division focal. Magbabago ang current desk at status, at magkakaroon ng bagong movement entry.

Sa Focal account, piliin ang transaction type, i-confirm ang document type at italaga ang active staff na magpoproseso. Sa example natin, si Danezel Christian Cruz ang assignee. Dito nagsisimula ang applicable assignment-based clock.

Ang due date ay galing sa configured rules. May transactions na nangangailangan ng special date kapag walang prescribed document-type deadline. Ang For information only ay para sa eligible focal assignment. Sundin ang available options sa actual form, hindi isang memorized na fixed deadline.

Matching screen beats

S08-1 Forward the hero record as mpaling; show at_focal in history.

S08-2 Switch to acabrera and assign to dcruz using an appropriate active transaction type.

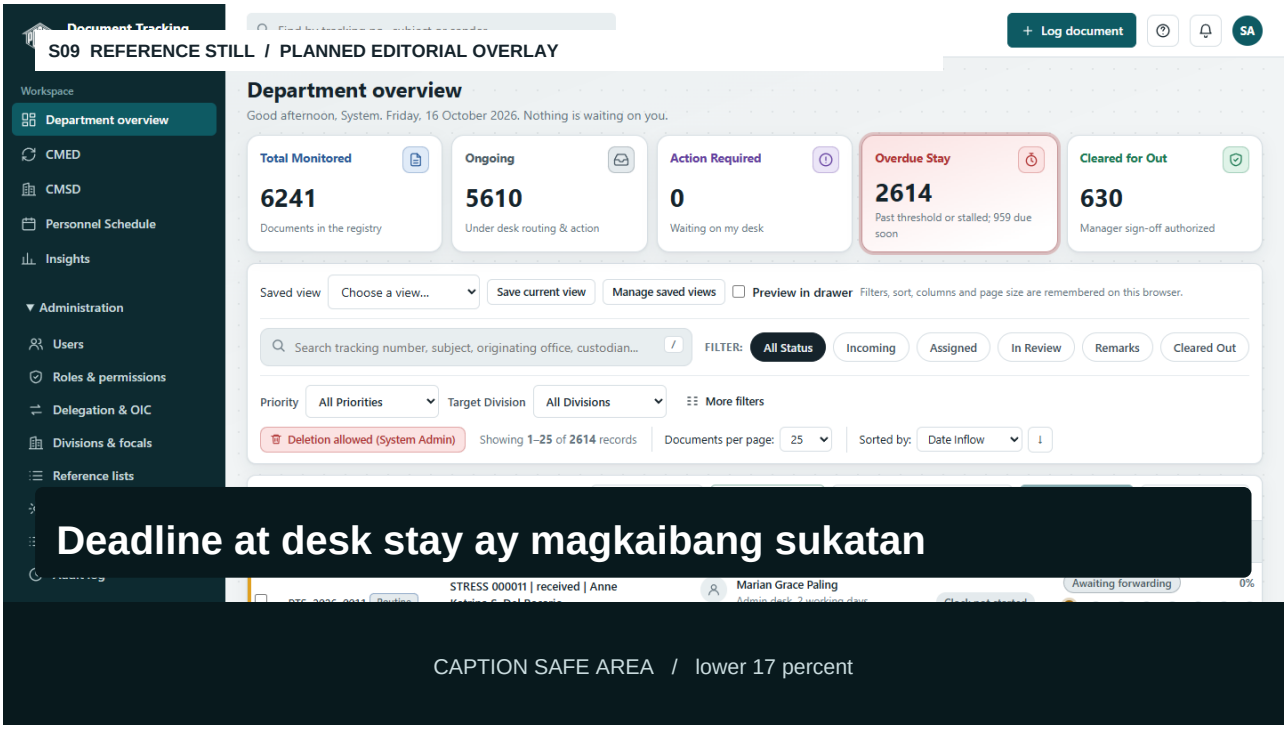

S08-3 Point to processing status, assignee, clock start and computed deadline.

Presenter cue Use the current configured threshold. Record exact account switches as separate takes; do not make one shared admin account impersonate the whole chain.

Evidence E01, E02, E07, E10 | Route #/doc/{id}

S09 Pag-unawa sa deadlines at desk limits

08:00-09:00 | Document lifecycle | Presenter and Focal

Spoken narration

Hindi iisang deadline ang para sa lahat. Puwedeng prescribed working days, calendar days, o reporting-period basis ang document type. May transaction-based deadline din kapag iyon ang applicable fallback.

Sa working-day calculations, may epekto ang weekends at configured holidays. Iba rin ang due soon, due today at overdue. Kapag walang applicable deadline, ipapakita iyon nang hiwalay sa record na hindi pa nagsisimula ang clock.

Bukod sa document deadline, may Admin at Focal desk limits para makita ang sobrang tagal sa isang desk. Kaya mahalagang basahin ang label at context. Ang Urgent priority ay hindi automatic na nagpapalit sa deadline rule.

Matching screen beats

S09-1 Compare labelled examples: unstarted, no deadline, on time, due soon, due today and overdue.

S09-2 Show a document-type basis and the Holidays reference tab without changing production values.

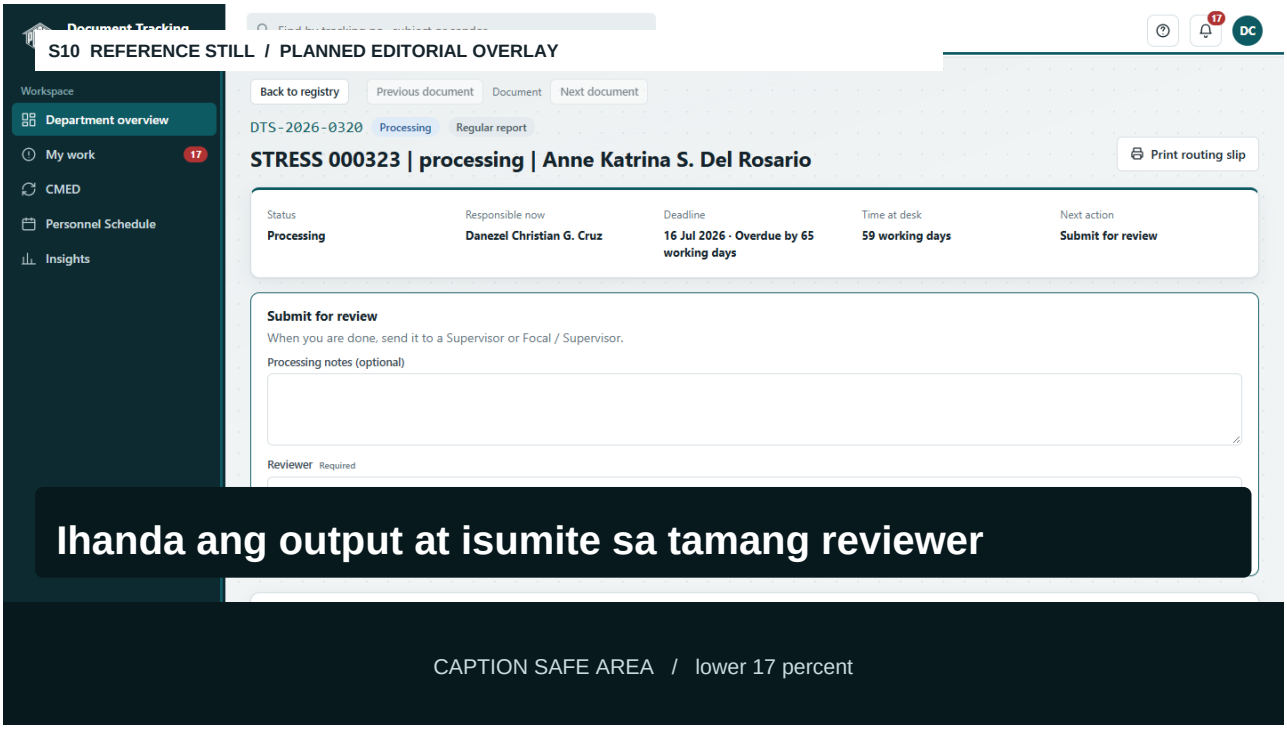

S09-3 Contrast deadline age with current-desk age using two populated test records.

Presenter cue Use visible dates from the recording day. Label examples rather than promising a particular due date for every document.

Evidence E01, E02, E08 | Route #/doc/{id} and Reference lists

S10 Staff processing at Files and links

09:00-10:00 | Document lifecycle | Danezel Christian G Cruz / Staff

Spoken narration

Sa Staff account, lalabas sa My work ang assigned document. Buksan ito at i-check ang instructions, deadline at source bago gumawa ng output. Ang DTS ang tracking record ng trabaho at review history.

Sa Files and links, puwedeng ilagay ang original, draft at revised file links ayon sa authority ng user. Ang actual files ay nasa linked storage. Hindi ito direct file upload o isang built-in document editor.

Kapag handa na ang draft, i-submit para sa review at piliin ang tamang eligible reviewer. Sa example, ang supervisor ni Cruz ay si Maria Urduja Jean Tabilas. Maglagay ng maikling context para mas malinaw kung ano ang kailangang tingnan ng reviewer.

Matching screen beats

S10-1 Sign in as dcruz and open the hero record from My work.

S10-2 Save a draft link; point out original, draft and revised link sections.

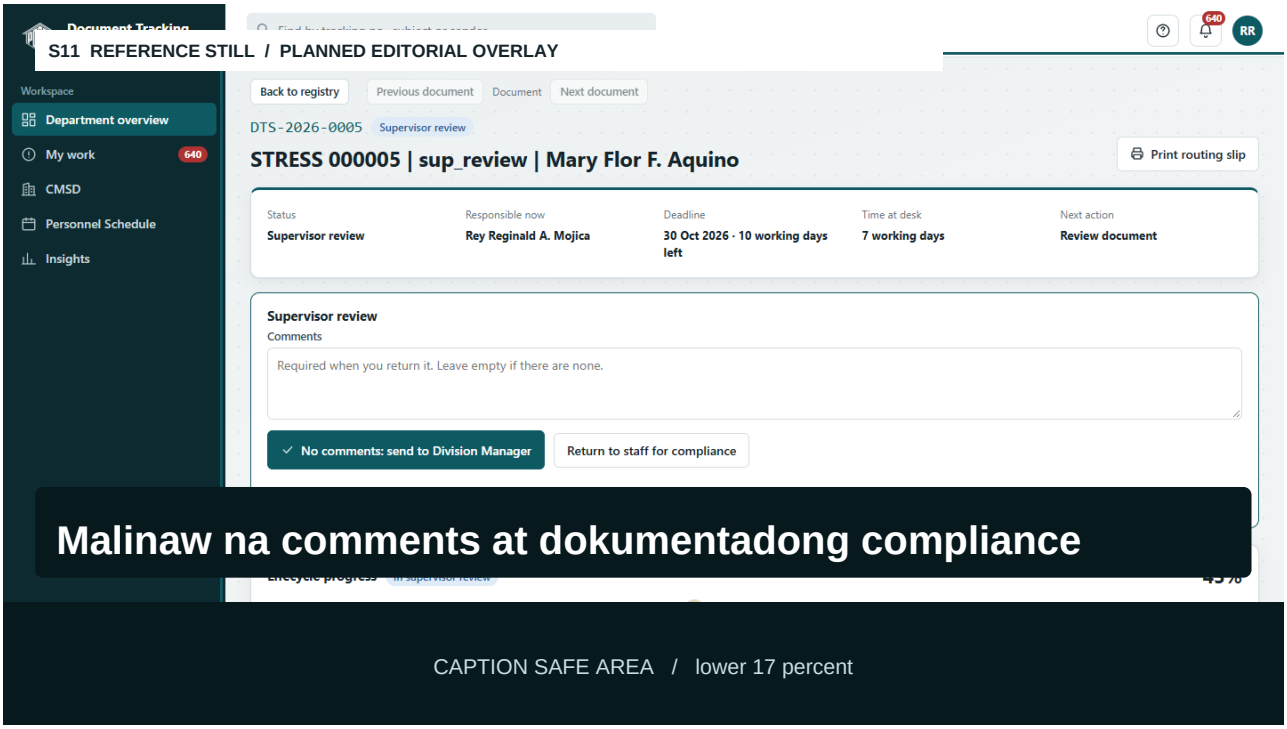

S10-3 Submit to mtabilas and show the supervisor-review status.

Presenter cue A link change and revision counter are not historical file-version storage. Opening external previews depends on the linked service and browser rules.

Evidence E01, E02, E03, E10 | Route #/action then #/doc/{id}

S11 Review comments at compliance cycle

10:00-11:00 | Document lifecycle | Supervisor then assigned Staff

Spoken narration

Sa Supervisor account, may dalawang karaniwang resulta: puwedeng i-approve ang draft o ibalik sa staff para sa compliance. Kapag ibabalik, ilagay ang malinaw at actionable na comments.

Makikita ng assigned Staff ang comments sa record. Gawin ang correction, i-update ang revised file link kung kailangan, at ilarawan kung paano na-address ang request bago mag-resubmit.

Naiiwan sa record ang compliance cycle at history. Ang resubmission behavior ay nakadepende sa configured policy, halimbawa kung babalik sa returning reviewer o magsisimula muli sa supervisor review. Sa demo, ipakita ang actual destination pagkatapos mag-submit.

Matching screen beats

S11-1 As mtabilas, return the hero document with one specific supporting-checklist comment.

S11-2 As dcruz, add a revised link and a concrete compliance response.

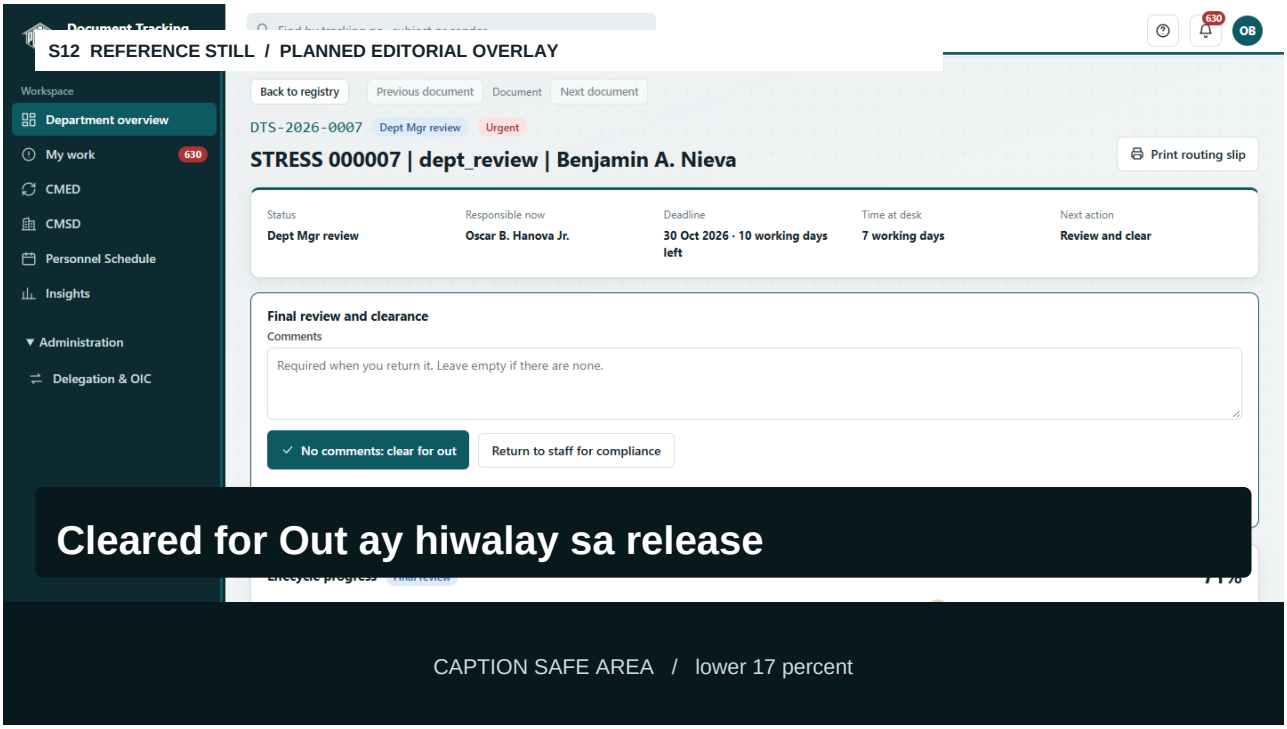

S11-3 Resubmit; show resolved comments, cycle count and the configured returning stage.

Presenter cue Resubmission resolves outstanding review comments together; do not imply individual per-comment resolution buttons.

Evidence E01, E02, E03 | Route #/doc/{id}

S12 Division review at clearance

11:00-12:00 | Document lifecycle | Supervisor then Division Manager then Department Manager

Spoken narration

Kapag maayos na ang output, itutuloy ng Supervisor ang document sa Division Manager. Mula roon, mapupunta ito sa Department review para sa final assessment at clearance.

Puwede pa ring may return for compliance sa applicable review stage. Kung cleared na, i-record ang clearance gamit ang tamang authorized account. Sa ordinary example natin, si Myles Martinez ang CMED Division Manager at si Oscar Hanova ang Department Manager.

Mahalagang distinction ito: ang Cleared for Out ay hindi pa ang actual release. Humihinto ang applicable processing clock sa clearance, pero may hiwalay pang log-out step para ma-record kung kailan at kanino inilabas ang document.

Matching screen beats

S12-1 Approve as mtabilas, then approve as mmartinez; show each status transition.

S12-2 Clear as ohanova and hold the Cleared for Out state.

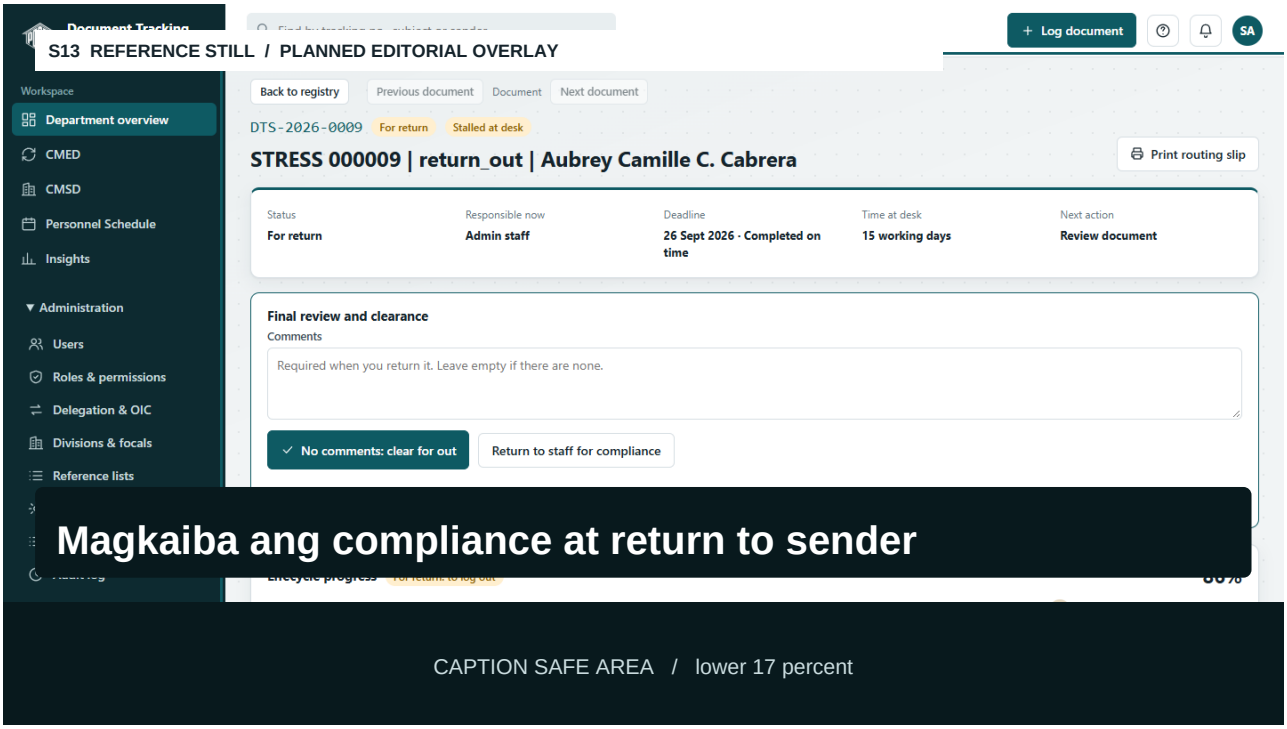

S12-3 Compare clearance timestamp with the still-empty release fields.

Presenter cue The live engine includes authorized early-clear/override cases. Present the standard sequence without claiming every review step is universally mandatory.

Evidence E01, E02, E10 | Route #/doc/{id}

S13 Reassignment at return to sender

12:00-13:00 | Document lifecycle | Focal or eligible manager and Admin Staff

Spoken narration

May mga pagkakataong kailangang ilipat ang processing sa ibang eligible staff. Sa allowed stage at account, gamitin ang reassignment at maglagay ng context. Mananatili ang movement history ng naging responsibility.

Iba naman ang return for compliance sa instruction na ibalik ang document sa sender. Sa return-to-sender path, maglalagay ang authorized reviewer ng reason at mapupunta ang document sa For return na naghihintay ng Admin log out.

Gumamit tayo ng hiwalay na sample para hindi mawala ang main example. Tingnan ang status, reason at next responsible desk bago magpatuloy. Walang generic cancel o reopen button na dapat ipakita bilang kasalukuyang feature.

Matching screen beats

S13-1 Use a separate processing record to reassign between two current eligible staff.

S13-2 Use another allowed record to enter an authorized return-to-sender instruction with a reason.

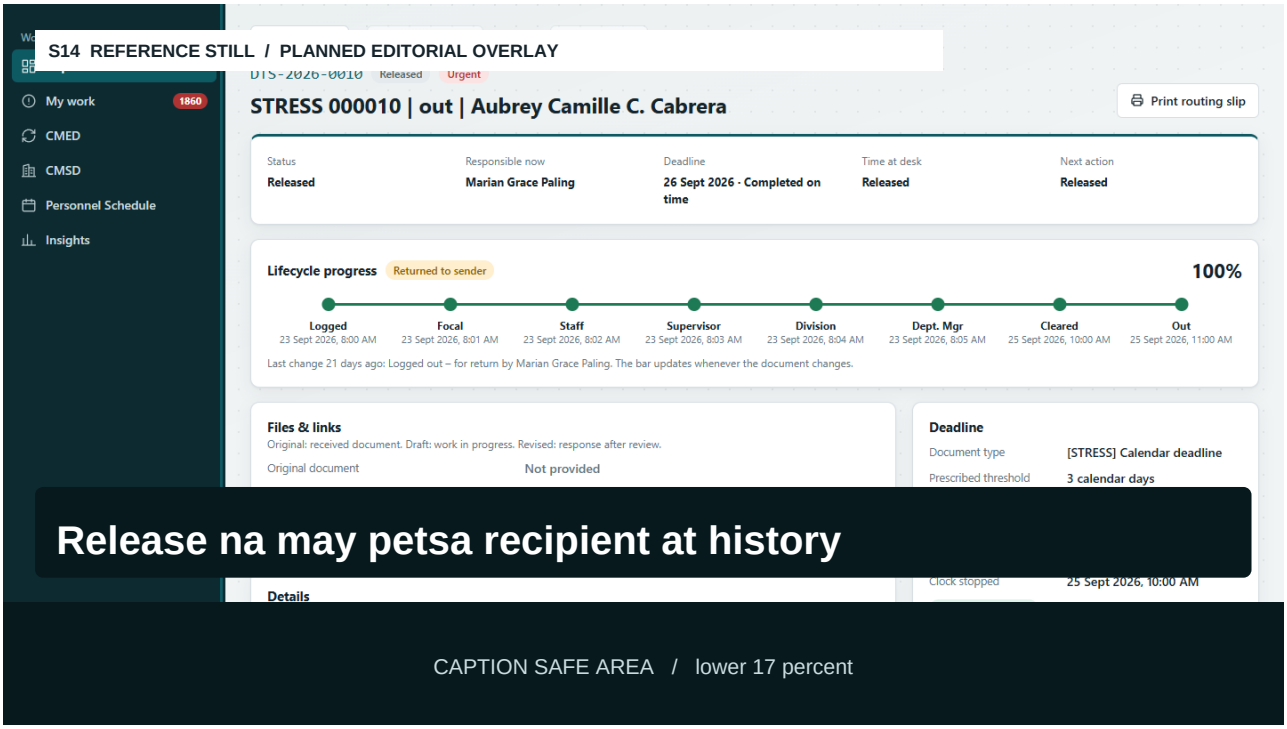

S13-3 Show return_out and its Admin release step beside the compliance example.

Presenter cue Show manager/override labels if used. Do not claim that reassignment always requires a reason field or resets the deadline.

Evidence E01, E02 | Route #/doc/{alternate-id}

S14 Actual release at routing slip

13:00-14:00 | Document lifecycle | Admin Staff

Spoken narration

Bumalik tayo sa cleared document. Sa Admin Staff account, ilagay kung kanino ito ire-release at ang applicable remarks. Kapag na-log out, may release timestamp, releasing user at destination na ang record.

Mananatiling searchable ang released document. Makikita pa rin ang registration details, comments at movement history. Puwede ring mag-print ng routing slip para sa record ng naging proseso.

May selected-record tools para sa print at CSV, at may eligible batch forwarding at log out. Basahin ang confirmation dahil may records na puwedeng ma-skip. Ang batch log out ay gumagamit ng original sender bilang recipient at current time, kaya individual release ang gamitin kapag iba-iba ang actual destination.

Matching screen beats

S14-1 Log out the hero record individually as mpaling with a specific demonstration destination.

S14-2 Open its movement history and print routing slip preview.

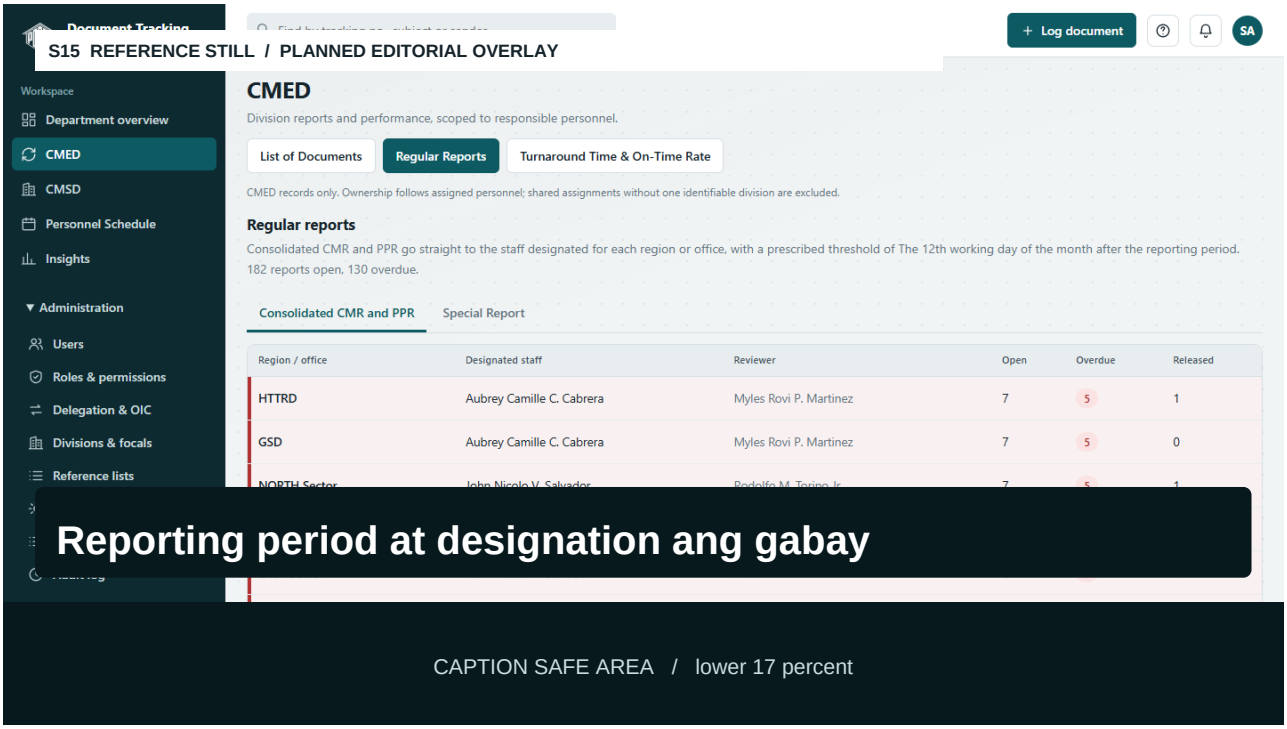

S14-3 Show batch controls on separate eligible test records and read the confirmation without deleting records.

Presenter cue Bulk deletion is administrator-controlled and optional to explain verbally; never demonstrate it against real records.

Evidence E01, E02, E03 | Route #/doc/{id} and registry batch controls

S15 Consolidated CMR and PPR

14:00-15:00 | Reports | Admin Staff and designated regional staff

Spoken narration

May espesyal na registration flow ang Consolidated CMR and PPR. Pipiliin ang region o office at reporting period, dahil ang responsibility ay galing sa configured report designation.

Kapag na-log ang reporting-period document, dumidiretso ito sa designated active staff at nilalampasan ang ordinary focal-assignment step. Ang division para sa bagong record ay galing sa configured assignee kapag identifiable ang division niya.

Ang deadline ay kino-compute mula sa document-type rule para sa reporting period. Ang starting rule para sa consolidated report ay sixth working day ng kasunod na buwan, pero puwedeng baguhin ng administrator ang configuration. Sa Regular Reports, makikita ang regions at status ng kanilang submissions.

Matching screen beats

S15-1 Open CMED Regular Reports and the consolidated-report tab.

S15-2 Create a sample for a configured region and reporting month; show designated staff and automatic routing.

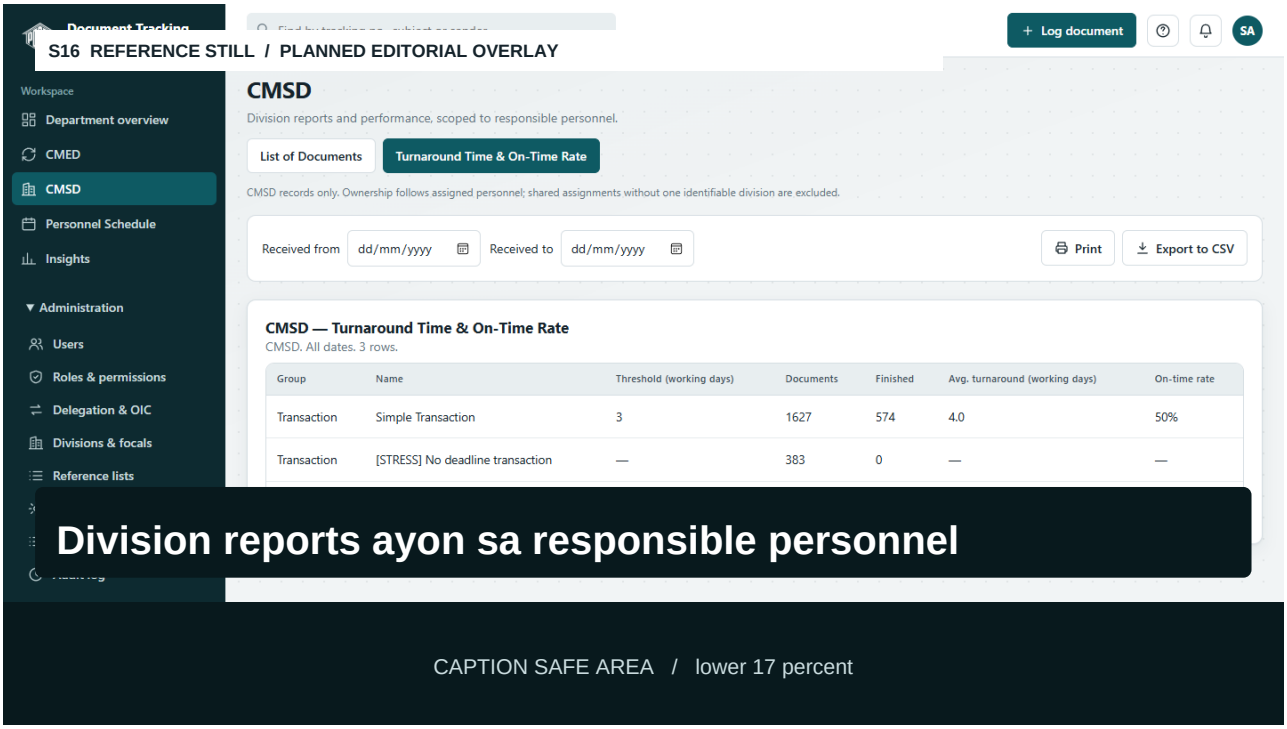

S15-3 Highlight the computed deadline and a region drilldown.

Presenter cue Confirm the current prescribed threshold before filming; do not narrate the default six days as an immutable rule.

Evidence E01, E02, E08 | Route #/cmed/regular

S16 CMED at CMSD reporting views

15:00-16:00 | Reports | Authorized division user or department account

Spoken narration

May magkahiwalay na destination ang CMED at CMSD. Ang default ay List of Documents. Sa CMED, may Regular Reports din; ang available performance tab ay Turnaround Time and On-Time Rate para sa account na may report permission.

Ang reporting ownership ay sumusunod sa responsible personnel. Kaya mahalaga ang tamang assignment at division ng user. Ang shared report na walang isang identifiable division ay hindi isinasama sa individual division metrics.

Ang division access ay chine-check din ng server. Pero hindi nito ibig sabihin na confidential na ang lahat ng underlying documents sa Department overview. Ihiwalay natin ang access sa division destination, permission na mag-action, at policy sa pagtingin ng basic records.

Matching screen beats

S16-1 Open CMED List of Documents, then CMED Regular Reports.

S16-2 Open CMSD and show its document list and performance tab; do not add a CMSD Regular Reports tab.

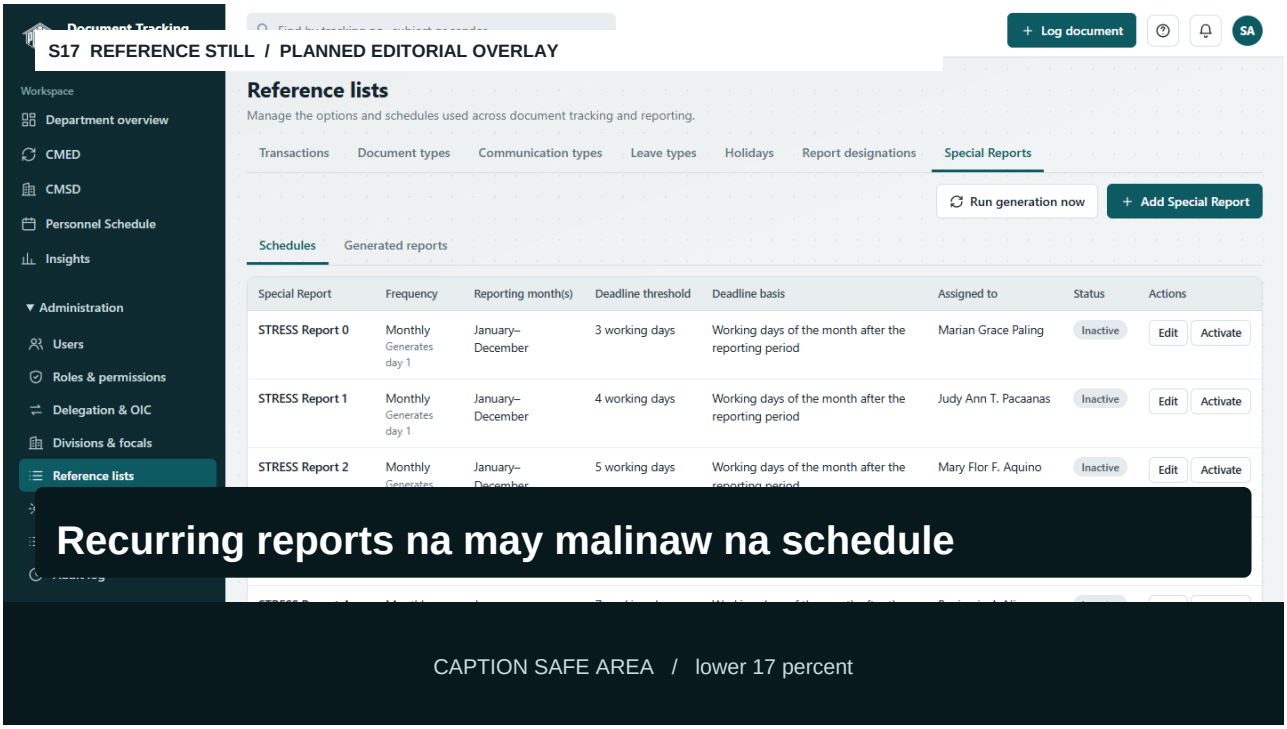

S16-3 Show a permitted account and a denied direct division route in separate takes.

Presenter cue This is reporting scope, not blanket record confidentiality. Keep this qualification in the spoken script.

Evidence E01, E02, E07, E08 | Route #/cmed and #/cmsd/performance

S17 Pag-configure ng Special Reports

16:00-17:00 | Reports | Administrator with configuration permission

Spoken narration

Para sa recurring obligations, may Special Reports schedules. Sa Reference lists, puwedeng itakda ang report name, frequency, reporting months, generation day, deadline threshold at responsible people o division focals.

Available ang monthly, quarterly, specific months at annual schedules. Ang generation ay para sa reporting period na natapos, at ang configured generation day ay nasa kasunod na buwan. Ipakita natin ang isang malinaw na monthly example.

Dapat may eligible responsible person bago i-activate ang schedule. Ang initial starter schedules ay inactive at unassigned. Hindi sapat na may report name lang; kailangang kumpleto ang configuration at responsibility para makabuo ng tamang assignment.

Matching screen beats

S17-1 Open Reference lists, Special Reports, Schedules.

S17-2 Show monthly, quarterly, specific-month and annual choices, generation day and working-day threshold.

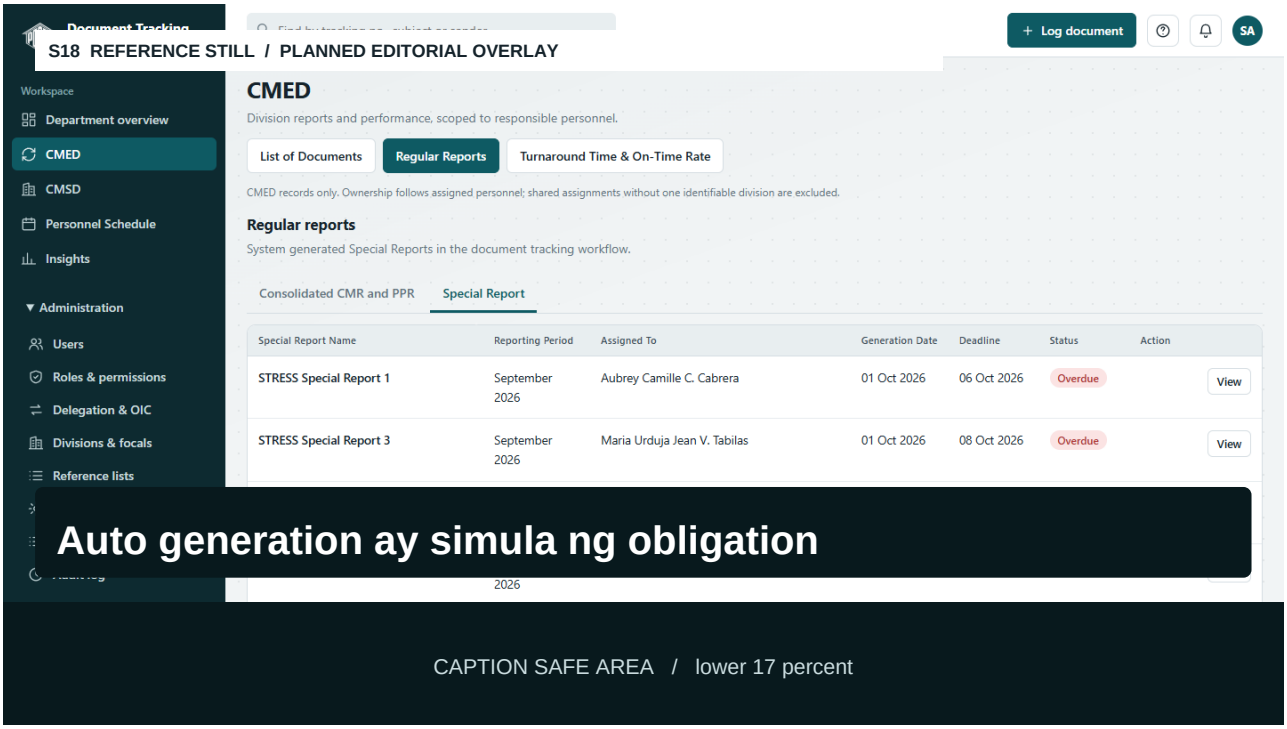

S17-3 Assign current staff on a disposable schedule and show the active-state validation.

Presenter cue Do not activate or change real recurring schedules while recording. Search supports enrolled names, roles and divisions.

Evidence E01, E04, E07, E08 | Route Reference lists > Special Reports

S18 Generated Special Reports at review workflow

17:00-18:00 | Reports | Assigned staff and reviewers

Spoken narration

Kapag due na ang schedule, ang server ang gumagawa ng report at assignment. Chine-check ito sa startup at periodically; may catch-up para sa missed generation dates at may protection laban sa duplicate obligation para sa parehong schedule at period.

Sa assigned staff account, lalabas ang report sa My work. Dadaan ito sa submission, review, possible compliance, clearance at log out. Nananatili ang assignment history kahit may allowed reassignment bago pumasok sa review.

May Special Report tab sa regular reporting area at kasama ang generated records sa relevant monitoring. Ang generation ay hindi automatic submission ng report content. Ang staff pa rin ang kailangang gumawa ng output at kumpletuhin ang review process.

Matching screen beats

S18-1 Show an existing generated report with period, deadline and responsible staff.

S18-2 Open it from My work; demonstrate one submission and compliance example.

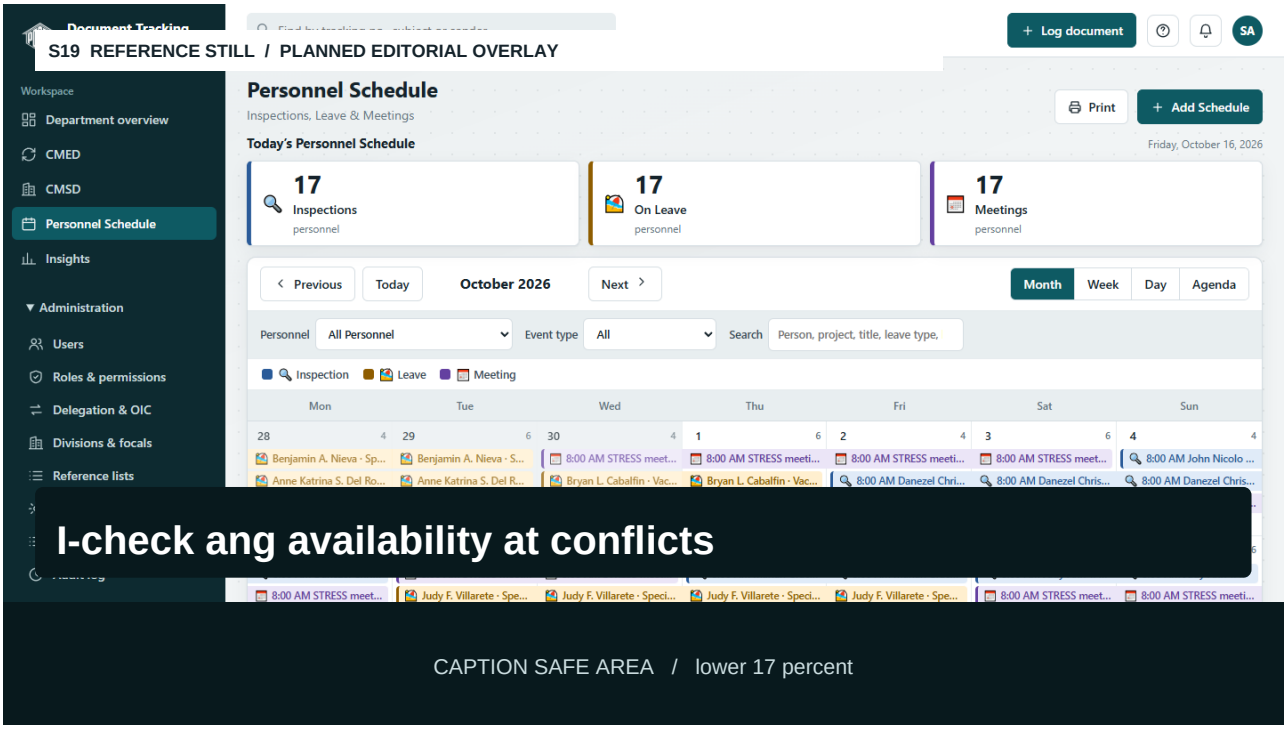

S18-3 Show generated-report assignment history and a released report in reporting.

Presenter cue Do not claim automatic Drive folders, email delivery or Personnel Schedule events. The generator uses configured working-day deadlines.

Evidence E01, E04, E07, E08 | Route CMED Regular Reports > Special Report / My work

S19 Personnel Schedule para sa availability

18:00-19:00 | Scheduling | Viewer then user with schedule management permission

CAPTION SAFE AREA / lower 17 percent

Spoken narration

Bukod sa documents, may Personnel Schedule para sa inspections, leave at meetings. Ang personnel ay mula rin sa enrolled user accounts, kaya hindi na kailangan ng hiwalay na pangalanan ulit ang parehong staff.

May Month, Week, Day at Agenda views. Puwedeng mag-filter at tingnan ang date range at mga taong kasali. Ang pag-add, edit at delete ay para sa account na may schedule-management permission.

Kapag may overlapping activity para sa parehong tao, may conflict warning. Puwedeng i-review ng authorized user at i-confirm ang Save anyway. Ang leave ay whole-day availability; hindi nito automatic na pinapalitan ang OIC o document assignee.

Matching screen beats

S19-1 Show all four calendar views and a personnel filter.

S19-2 Create one test inspection, leave entry and meeting; show shared participants.

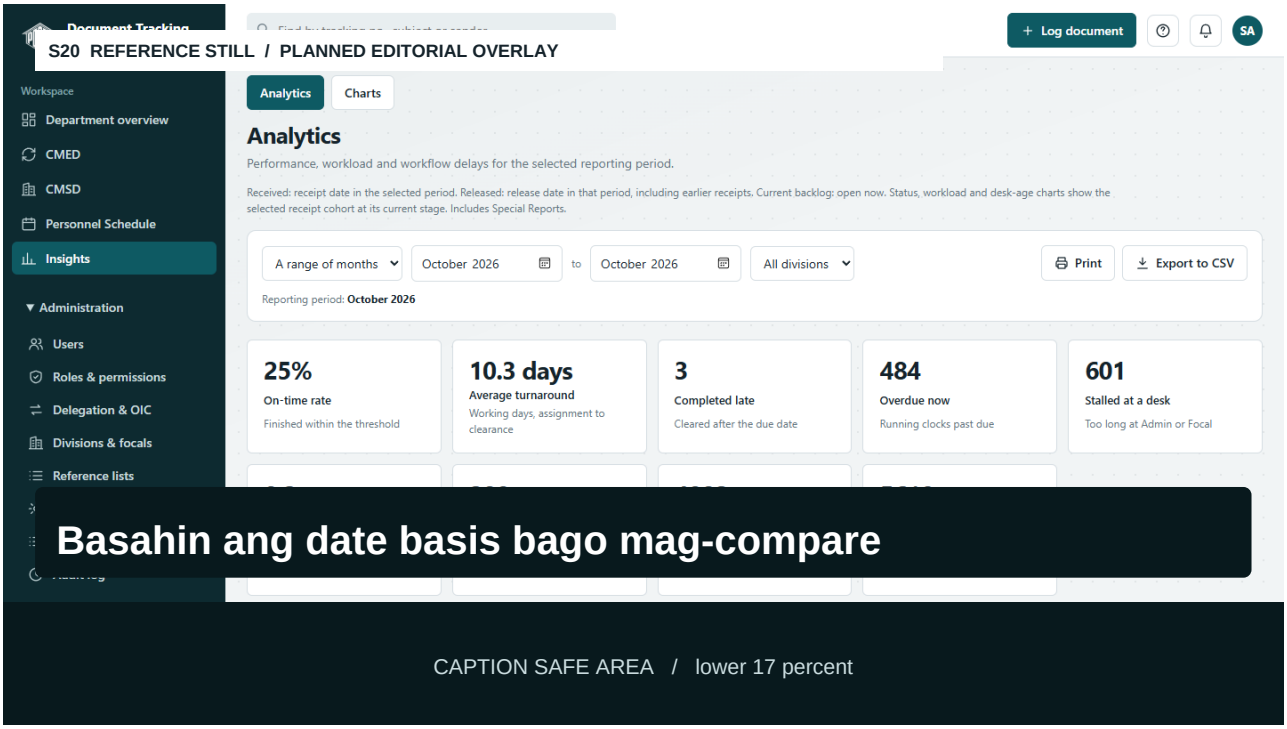

S19-3 Trigger an overlap warning, explain confirmation, then show the saved schedule details.

Presenter cue Inspection project is free text with suggestions from prior entries, not a separate project-management module. No automatic leave-to-OIC linkage.

Evidence E01, E05, E07, E08 | Route #/schedule

S20 Analytics at tamang pagbasa ng metrics

19:00-20:00 | Monitoring | User with report permission

Spoken narration

Sa Insights, buksan ang Analytics at piliin ang reporting period at division. Makikita ang document volume, open at finished work, on-time rate, average turnaround at supporting breakdowns.

May kahulugan ang bawat date basis. Ang receipt cohort ay batay sa date received. Ang released-in-period ay batay sa release date, kahit mas maaga natanggap ang document. Ang current backlog ay open records ngayon mula sa lahat ng receipt dates.

Ang turnaround na ipinapakita ay working days mula assignment hanggang clearance, hindi simpleng receipt-to-dispatch time. Basahin din ang cohort at threshold bago mag-compare ng staff o division. Hindi natin tatawaging productivity score ang isang number na walang context.

Matching screen beats

S20-1 Open Analytics and set a visible month range and division.

S20-2 Highlight the receipt, release and current-backlog KPI notes.

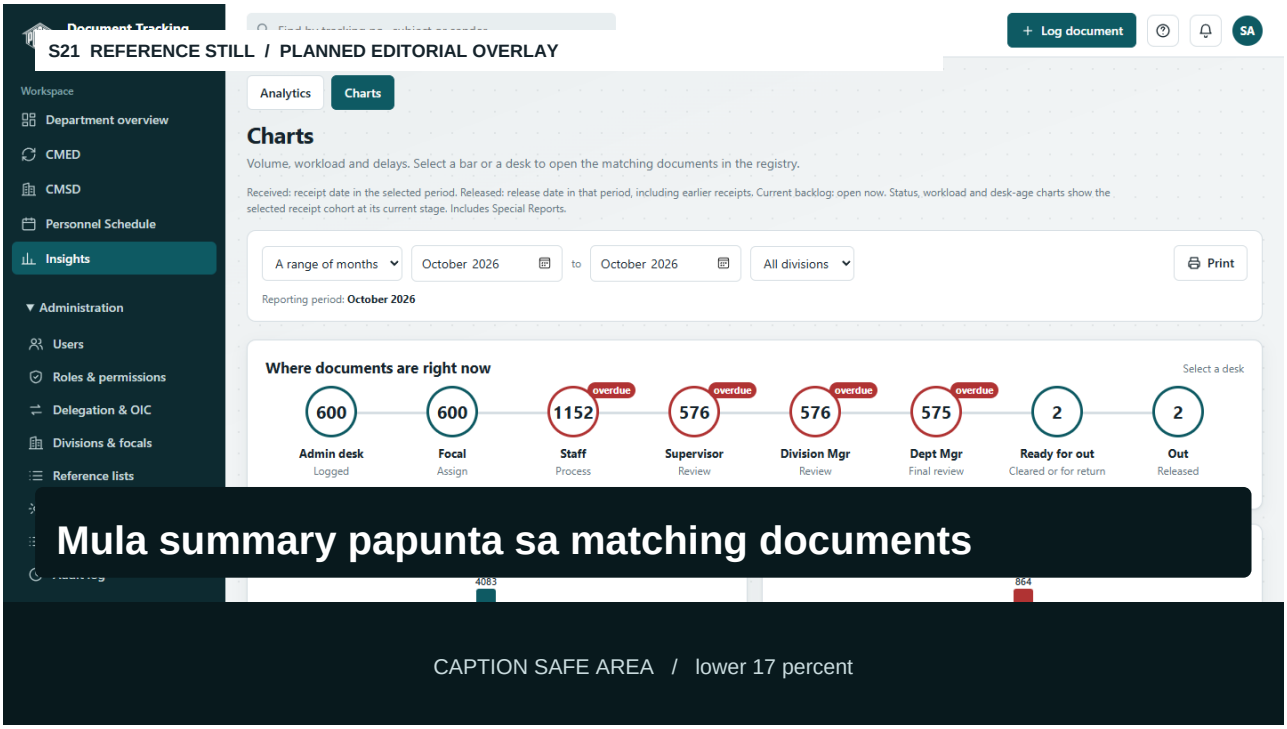

S20-3 Point to turnaround and on-time labels, then staff/document/transaction breakdown tables.

Presenter cue Finished metrics can include records with a stopped clock at clearance. Retain the distinction from final release.

Evidence E02, E03, E08 | Route #/analytics

S21 Charts at drilldown sa actual records

20:00-21:00 | Monitoring | User with report permission

Spoken narration

Sa Charts, mas madaling makita ang volume by month, received at released records, finished on time o late, status mix at deadline health. May view rin ng workload at time sa current desk.

Kapag may malaking overdue o desk-age group, puwedeng piliin ang applicable chart bar o desk para buksan ang matching registry records. Nananatili ang relevant reporting filters para may malinaw na koneksiyon ang chart at underlying list.

Gamitin natin ang drilldown para mag-verify. Hindi sapat ang mataas na bar lang; tingnan kung anong documents ang nasa likod nito, sino ang current assignee, at anong action ang kailangan. Mas nagiging specific ang follow-up kapag record-level na ang usapan.

Matching screen beats

S21-1 Show monthly volume, status mix, deadline health and staff workload.

S21-2 Click an age band or desk and inspect the filtered registry.

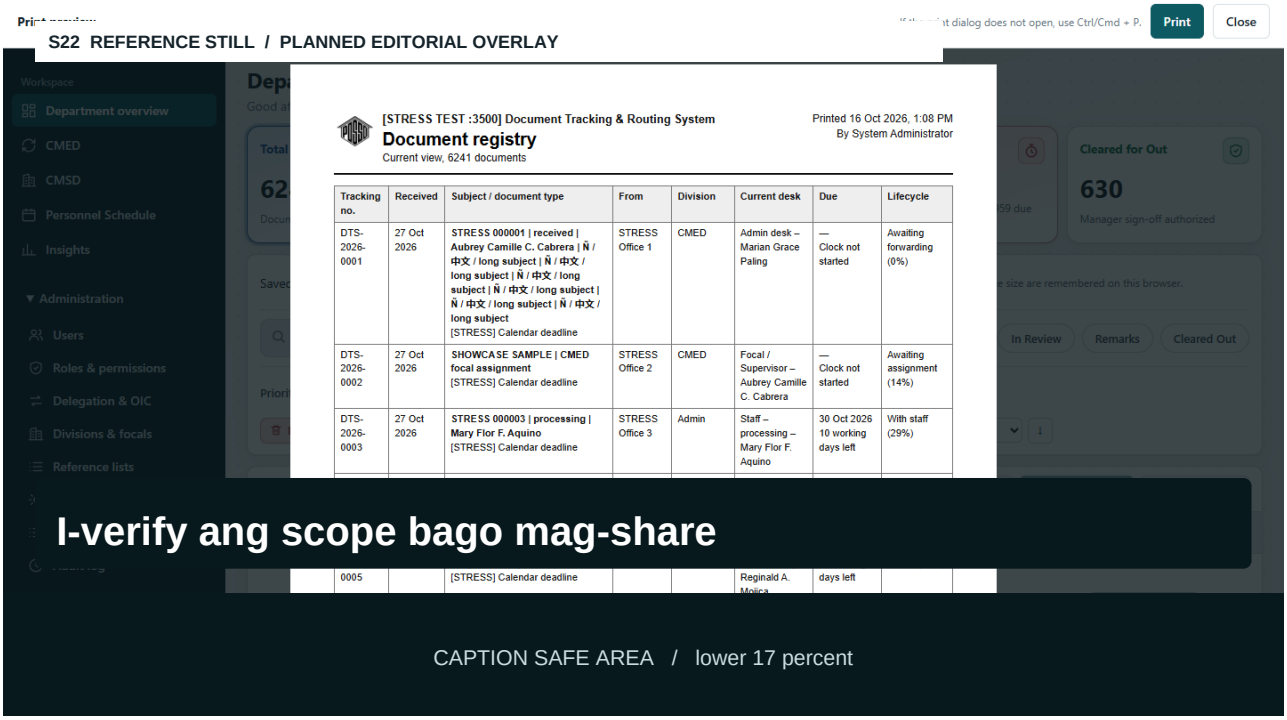

S21-3 Open one matching document, then return to the selected chart context.

Presenter cue Some charts show the selected receipt cohort while release totals use release dates. Keep visible period labels in every capture.

Evidence E02, E03 | Route #/graphs

S22 Print CSV at selected outputs

21:00-22:00 | Monitoring | User with print and export permission

Spoken narration

Kung kailangan ng offline copy o supporting list para sa meeting, may print at CSV tools sa relevant pages. Sa registry, puwedeng current filtered records o selected records ang output, depende sa kasalukuyang selection.

May routing slip para sa document history, registry printout, analytics summary, division performance output at chart printing. I-check ang heading, period, division at record count bago mag-print o mag-share.

Ang exported CSV ay para sa spreadsheet analysis; hindi ito CSV import feature. Kapag may selection, siguraduhing iyon talaga ang gustong i-export. Ipakita natin ang preview at file contents para makita na tugma ang output sa scope na pinili.

Matching screen beats

S22-1 Filter the registry and export a CSV; verify headers, count and scope.

S22-2 Show a routing slip, analytics print preview and a division-performance export.

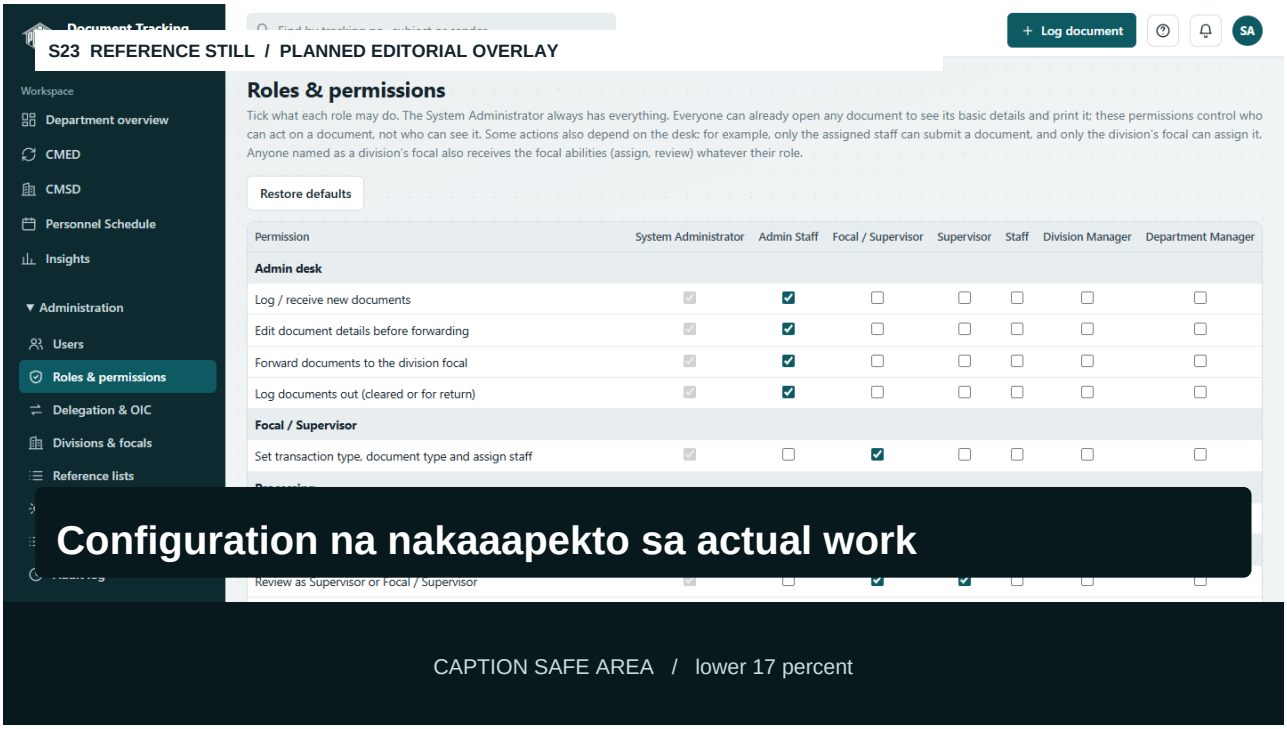

S22-3 Show chart print and audit output controls only under authorized accounts.

Presenter cue A printable chart page may depend on browser print settings. Do not portray exports as automatic scheduled distribution.

Evidence E02, E03, E07 | Route Registry / Analytics / Charts / Audit

S23 Users roles at division focals

22:00-23:00 | Administration | System Administrator

Spoken narration

Sa Users, makikita ang enrolled accounts, role, division, active state at last sign-in information. Ang administrator ang may control sa account creation, maintenance at password reset ayon sa available permissions.

Sa Roles and permissions, nakikita kung anong actions ang pinapayagan sa bawat role. May desk conditions pa rin: halimbawa, assignment para sa tamang focal at submission para sa assigned staff. Ang System Administrator ay may broad administrative authority.

Sa Divisions and focals, itinatakda kung sino ang receiving focal ng bawat division. Hindi dapat basta i-deactivate ang configured focal nang walang kapalit. Ang changes sa role at assignment ay dapat sinasadya, dahil nakaaapekto ang mga ito sa queues, routing at reporting ownership.

Matching screen beats

S23-1 Open the current 18-account roster; highlight role/division/active columns.

S23-2 Show the permission matrix without changing real permissions.

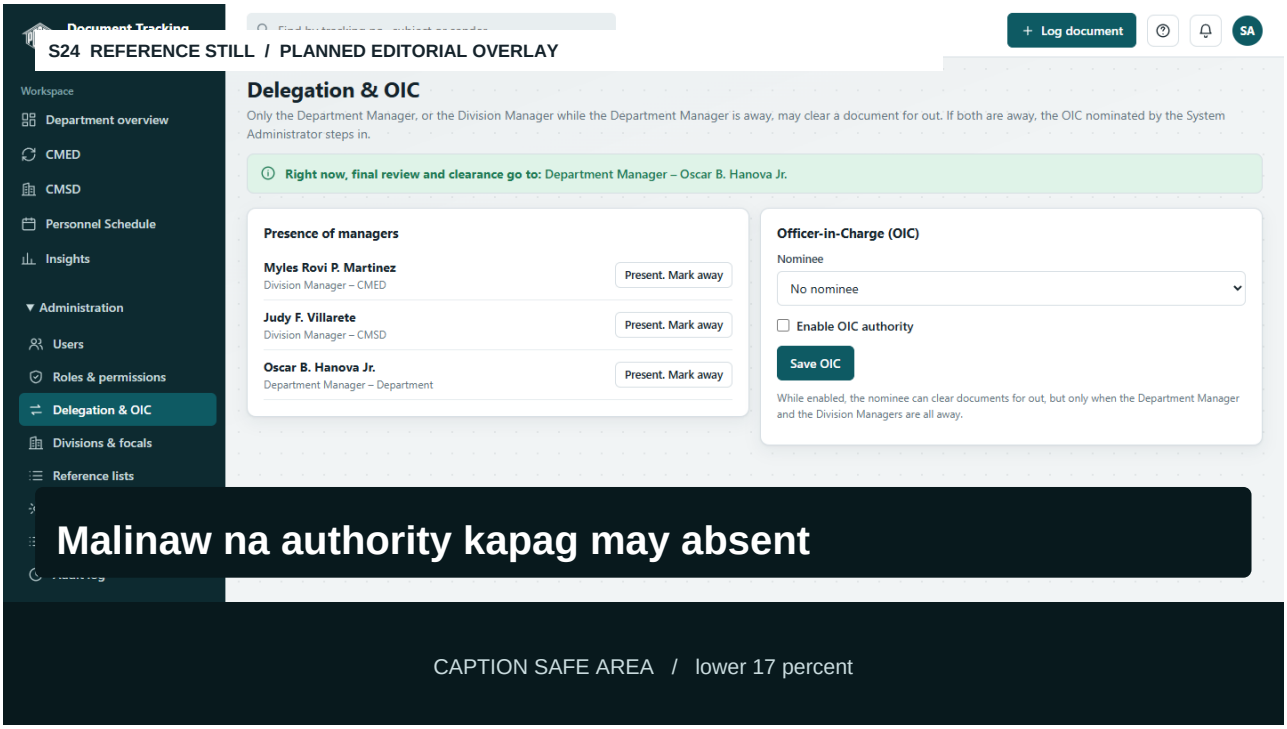

S23-3 Open Divisions and focals and show the current CMED/CMSD focal mappings.

Presenter cue Explain account deactivation and reset verbally or in an isolated copy. General viewing policy is distinct from action permissions.

Evidence E01, E02, E07, E10 | Route #/users > #/roles > #/divisions

S24 Delegation presence at OIC

23:00-24:00 | Administration | Manager and authorized OIC administrator

Spoken narration

Kapag wala ang usual approving manager, may Delegation and OIC page para makita ang configured availability at final-review responsibility. Nandito ang manager presence at nominated OIC.

Ang resolver ay tumitingin sa present Department Manager, applicable Division Managers at enabled eligible OIC ayon sa current rules. May authorized clearance paths din sa operational engine, kaya sundin ang actual account permissions at action panel.

Manually maintained ang manager presence at OIC setup. Hindi ito automatic na ine-enable dahil lang may leave entry sa Personnel Schedule, at walang automatic delegation-expiry workflow na dapat i-assume. Sa demo, ibalik ang test configuration pagkatapos ipakita ang fallback.

Matching screen beats

S24-1 Show the current final-review responsibility banner.

S24-2 On a disposable copy, demonstrate present/away states and OIC nomination/enable controls.

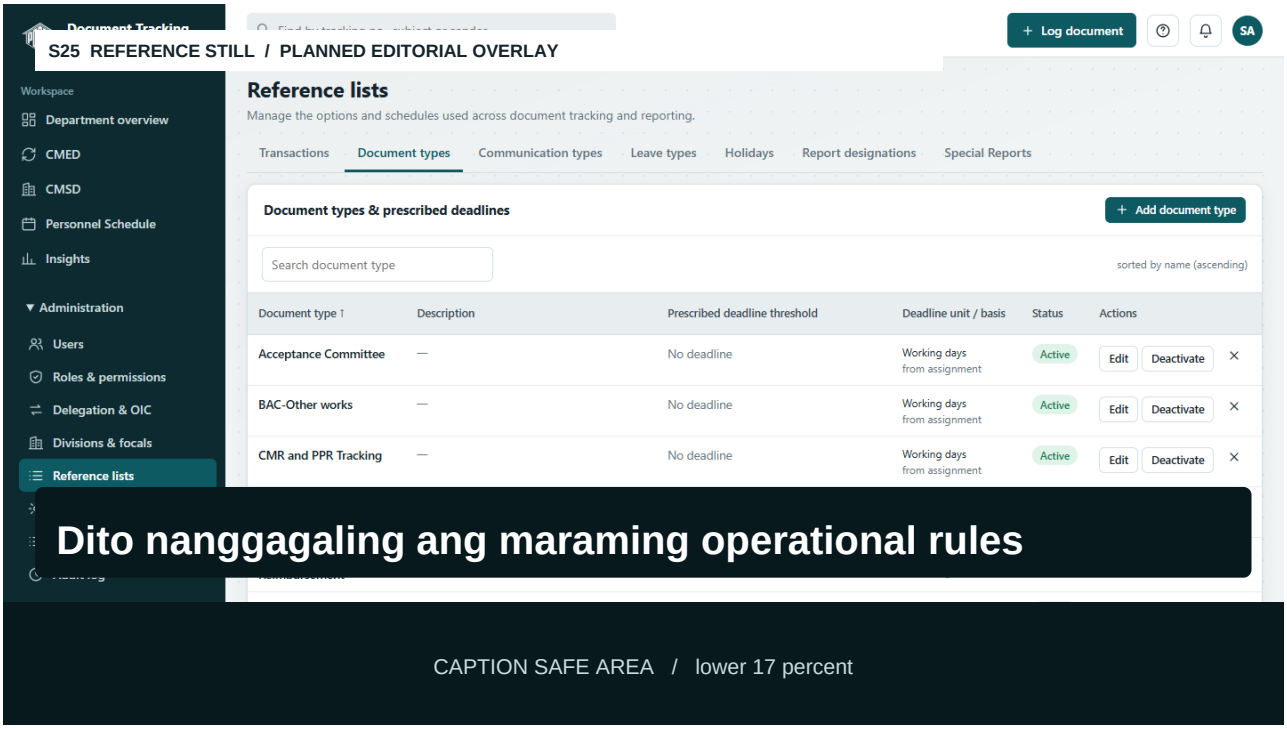

S24-3 Restore original test presence/OIC settings and point back to the applicable document action.

Presenter cue Avoid claiming that all clearance is universally blocked whenever a manager is away; existing authorized exceptions must remain explicit.

Evidence E01, E02, E07 | Route #/delegation

S25 Reference lists at business rules

24:00-25:00 | Administration | User with configuration permission

Spoken narration

Sa Reference lists nakalagay ang options at rules na paulit-ulit ginagamit sa system. Kasama ang Transactions, Document types, Communication types, Leave types, Holidays, Report designations at Special Reports.

Sa document types, puwedeng i-configure ang prescribed threshold, unit at deadline basis. Sa report designations, itinatakda ang responsible staff ng bawat region o office. Sa holidays, nakasalalay ang working-day calculations.

Ang active o inactive na state ay mahalaga para sa bagong entries at historical records. May dependency checks sa ilang ginagamit nang references. Bago magbago ng business rule, i-review ang epekto at sundin ang authorized configuration process.

Matching screen beats

S25-1 Walk through all seven Reference list tabs with their actual labels.

S25-2 Open a document-type dialog; highlight threshold, basis, unit and active state.

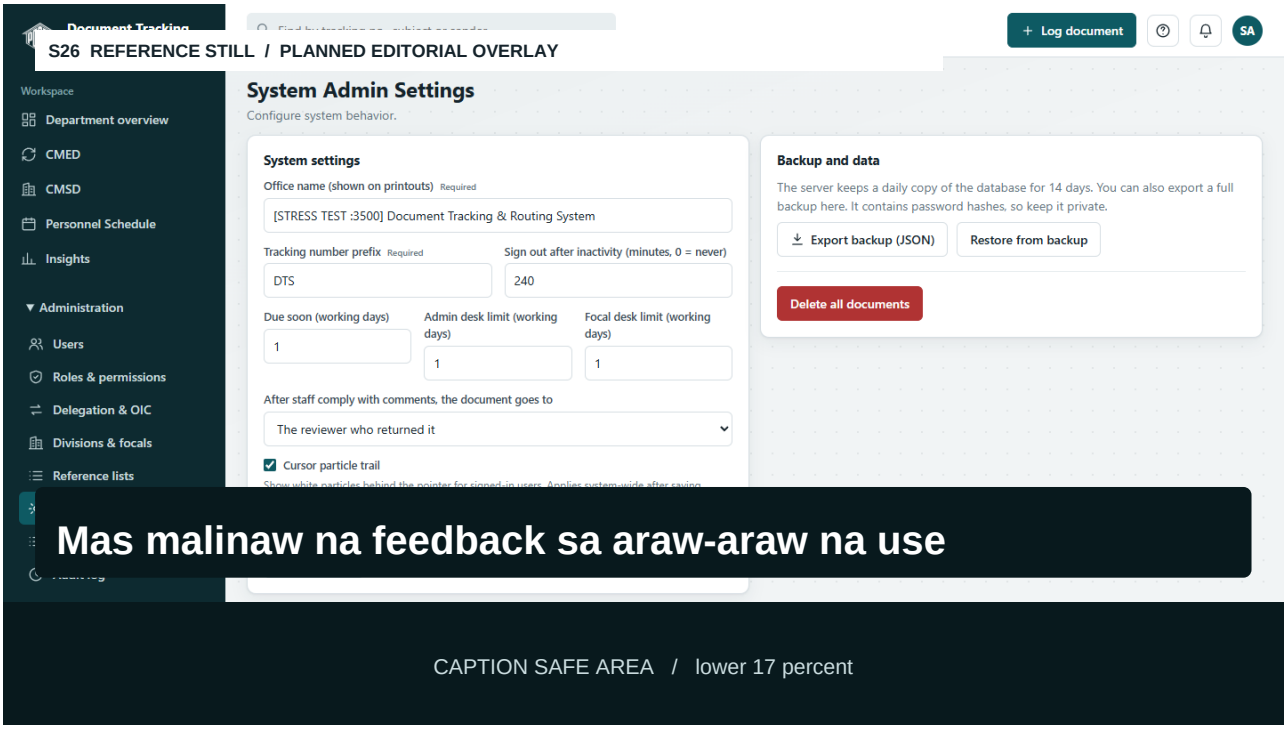

S25-3 Show Holidays and Report designations, then a protected used-reference example on the test copy.

Presenter cue Do not delete historical references for cosmetic cleanup. Changes generally govern subsequent computation/generation rather than rewriting all historical workflow records.

Evidence E01, E02, E07, E08 | Route #/refs

S26 Settings at everyday usability

25:00-26:00 | Administration | Administrator and ordinary staff comparison

Spoken narration

Sa System Admin Settings, may office name, tracking prefix, inactivity timeout, due-soon threshold, desk limits, resubmission policy at cursor particle trail. Ang mga ito ay system behavior settings na kailangang i-review bago i-save.

Sa ordinary use, may keyboard shortcuts, responsive tables, clear saving feedback at protection kapag may unsaved changes. May focus handling sa dialogs para mas maayos ang keyboard navigation.

Puwedeng itoggle ang decorative cursor effect, at may respect ito sa reduced-motion preference. Ang theme at saved registry preferences ay browser-level conveniences. Ang system settings naman ay server-saved at lumalabas sa ibang users sa normal refresh cycle.

Matching screen beats

S26-1 Show each settings field without changing the live configuration.

S26-2 Open keyboard shortcuts; show an unsaved-change prompt on a disposable form.

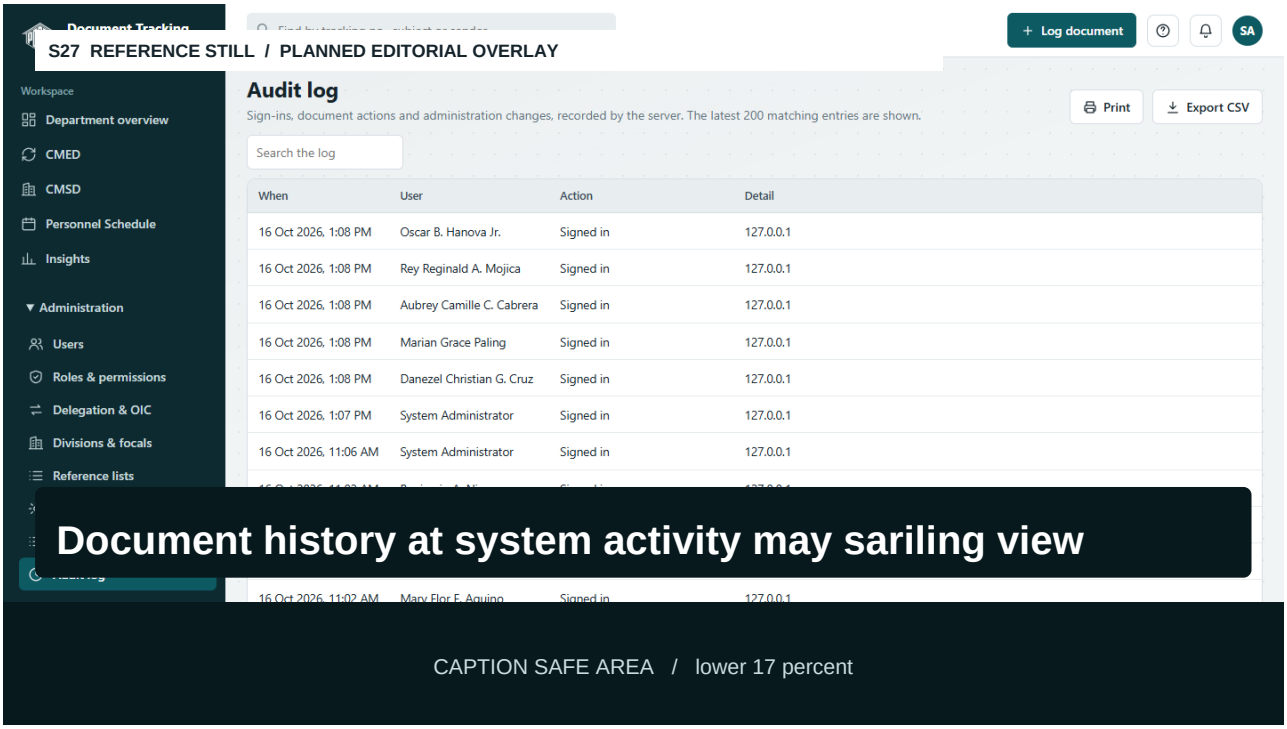

S26-3 Show light/dark theme and reduced-motion-friendly cursor settings briefly.

Presenter cue Keep cursor effects subtle in the recording. Do not claim a formal accessibility certification.

Evidence E02, E03, E08 | Route #/settings and account menu

S27 Audit log para sa traceability

26:00-27:00 | Administration | User with audit permission

Spoken narration

Bukod sa movement history ng isang document, may Audit log para sa system activity. Kasama rito ang sign-ins, document actions at administrative changes na nire-record ng server.

Puwedeng mag-search ng relevant entries at gumamit ng available print o export controls. Ang screen ay nagpapakita ng latest matching entries sa supported limit; hindi ito unlimited full-history search sa bawat lumang event.

Para sa isang concern, magsimula sa document history, saka i-correlate sa audit entry kung kailangan. May user, time, action at detail para mas madaling ma-review ang nangyari. Hindi natin ilalarawan itong tamper-proof compliance certification o legal electronic-signature system.

Matching screen beats

S27-1 Search the audit log using the hero tracking number or a distinctive action detail.

S27-2 Point to timestamp, user, action and detail columns.

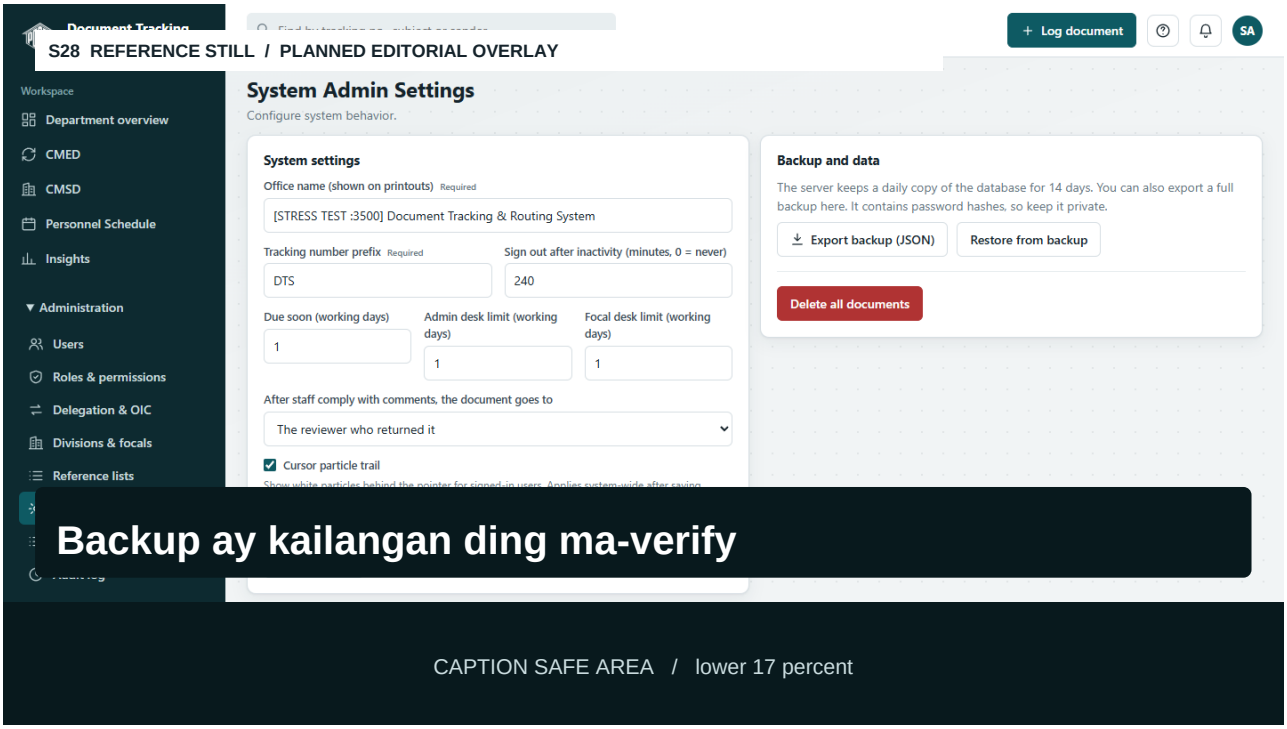

S27-3 Compare one audit action with the hero document movement entry; show export permission.

Presenter cue Current audit query searches a recent server-side window and displays up to 200 matches. Use current visible labels rather than claiming unlimited audit retention.

Evidence E02, E07 | Route #/audit

S28 Backup restore at recovery

27:00-28:00 | Administration | Administrator with data permission

Spoken narration

May administrator tools para sa full JSON backup at restore. Naka-include ang core configuration at supported records, kaya iba ito sa isang filtered CSV report.

Sa restore, vini-validate ang supplied data at may recovery copy bago palitan ang stored state. Sa server, may daily SQLite backups at retention para sa recent backup files. Kailangan pa rin ng approved off-machine backup routine.

Sa showcase, ipapakita natin ang controls at prepared results sa isolated test copy. Hindi tayo magre-restore o mag-clear ng real records habang nagpe-present. Pagkatapos ng authorized recovery, i-verify ang users, documents, schedules, reports at ability na mag-sign in.

Matching screen beats

S28-1 Show Backup and Restore controls, keeping reset/clear actions visually separate.

S28-2 Use a labelled test-only insert showing valid restore and rejected invalid restore results.

S28-3 Show recovered counts and successful sign-in from the stress-test evidence.

Presenter cue Backups contain sensitive application/account data. Use approved storage; do not expose backup contents or password hashes in footage.

Evidence E07, E08, E09 | Route #/settings > Settings and data

S29 Workflow Designer at simulation

28:00-29:00 | Administration | System Administrator

Spoken narration

May visual Workflow Designer para gumawa at mag-review ng workflow definitions. Puwedeng maglagay ng Start, Action, Decision at End, ayusin ang connectors, labels, properties at layout, at mag-save ng draft.

May validation, versioning, publish at simulation. Sa simulation, puwedeng gumamit ng sample document at makita ang branch path at candidate responsibility nang hindi binabago ang actual document workflow.

Sa current version, ang designer ay para sa drafting, publishing at simulation. Ang live document actions ay gumagamit pa rin ng existing operational engine; hindi pa enabled ang generic designer execution. Kaya huwag nating sabihing automatic nang magro-route ang documents dahil lang na-publish ang diagram.

Matching screen beats

S29-1 Open a prepared draft with Start, Action, Decision and End; show properties and connector labels.

S29-2 Show Arrange, fit, zoom, minimap, undo/redo, save state and a version selector.

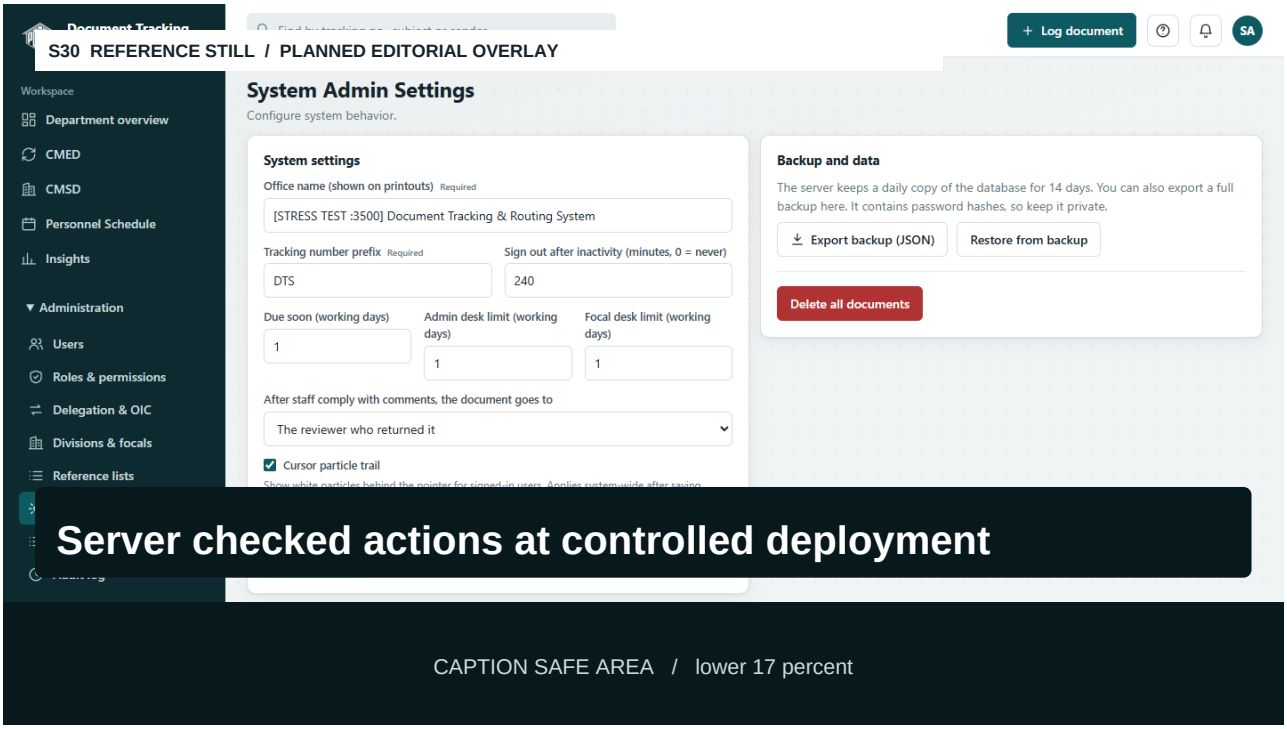

S29-3 Run validation and read-only simulation; place a visible current-scope label beside the result.

Presenter cue Label the scene Designer and simulation. Do not animate a notification node as if it actually sends email or changes live assignments.

Evidence E06, E07, E08 | Route #/workflow

S30 Security deployment at practical boundaries

29:00-30:00 | Operations | Presenter

Spoken narration

Sa operational side, server-checked ang sign-in at action permissions. May hashed password storage, protected session cookie, failed-login throttling at configurable inactivity timeout. Ang account deactivation at password reset ay may session effects.

Para sa real deployment, kailangan ang HTTPS at maayos na server access at backup setup. Ang staff ay bumubukas ng browser sa approved DTS address; ang shared database ay nasa server.

May malinaw ding current boundaries: external file links ang ginagamit, walang direct binary upload, walang built-in email reminder service, at hindi parallel workflow execution ang kasalukuyang operational flow. Ang mga ito ay planning considerations, hindi features na dapat idagdag sa demonstration graphics.

Matching screen beats

S30-1 Use a simple labelled browser-to-server diagram, not an invented cloud integration dashboard.

S30-2 Show security controls conceptually without exposing keys, cookies or stored hashes.

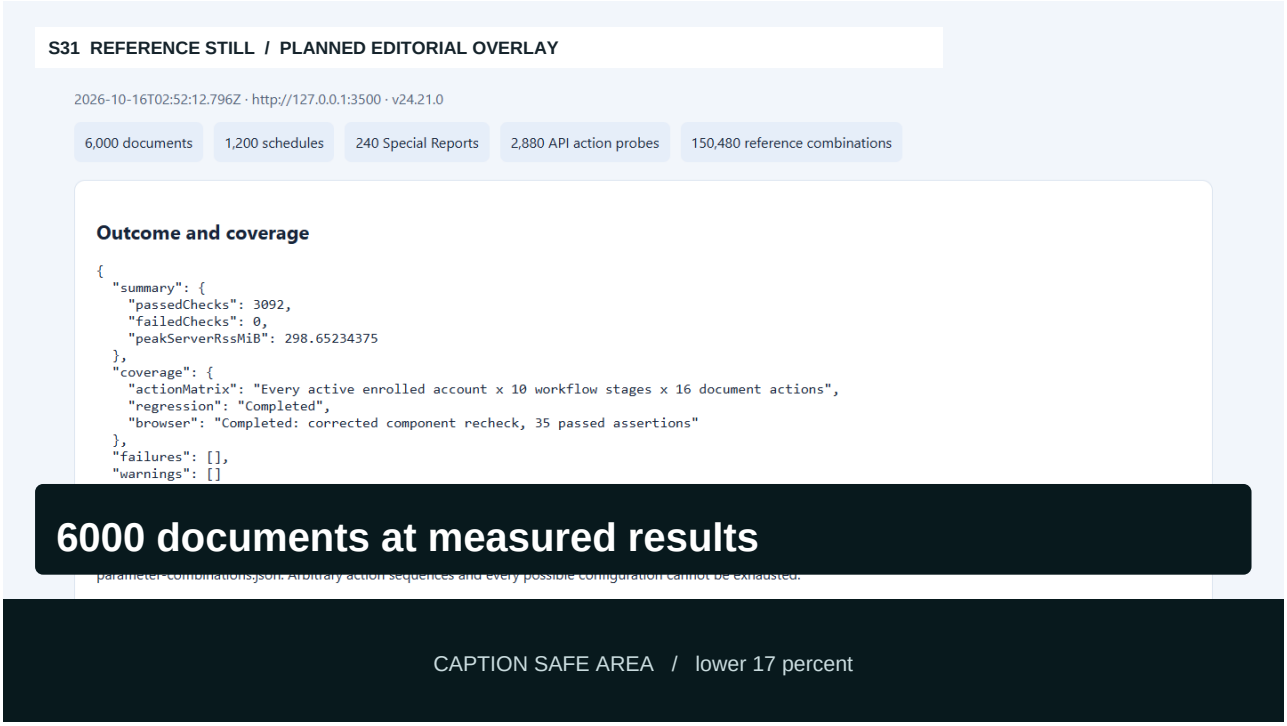

S30-3 Present three current boundaries as small factual labels beside real screen captures.

Presenter cue Avoid absolute claims such as impossible to hack, fully compliant or encrypted file storage. Session and permission controls do not establish blanket division confidentiality.

Evidence E07, E08 | Route Sign-in / settings / architecture visual

S31 Performance proof gamit ang stress test

30:00-31:00 | Operations | Presenter and stress-test operator

Spoken narration

May hiwalay tayong stress-test launcher para makita ang behavior ng DTS sa mas maraming records. Sa verified run noong October sixteen, twenty twenty-six, may six thousand documents, twelve hundred schedules at two hundred forty-one Special Reports pagkatapos ng scenario checks.

Kasama ang eighteen enrolled accounts, two thousand eight hundred eighty account-stage-action probes at one hundred fifty thousand four hundred eighty reference combinations. Pumasa rin ang twenty-four maintained regression suites.

Sa thirty concurrent full-state requests, ang measured p95 latency ay about two point nine seconds, with zero HTTP errors sa load measurements. Resulta ito sa tested machine at workload, hindi guarantee ng unlimited capacity. Ipakita ang dated report at actual measurements para malinaw ang context.

Matching screen beats

S31-1 Open the saved PASS report; show the dated dataset and account count.

S31-2 Show the action-matrix and reference-combination totals plus maintained-suite results.

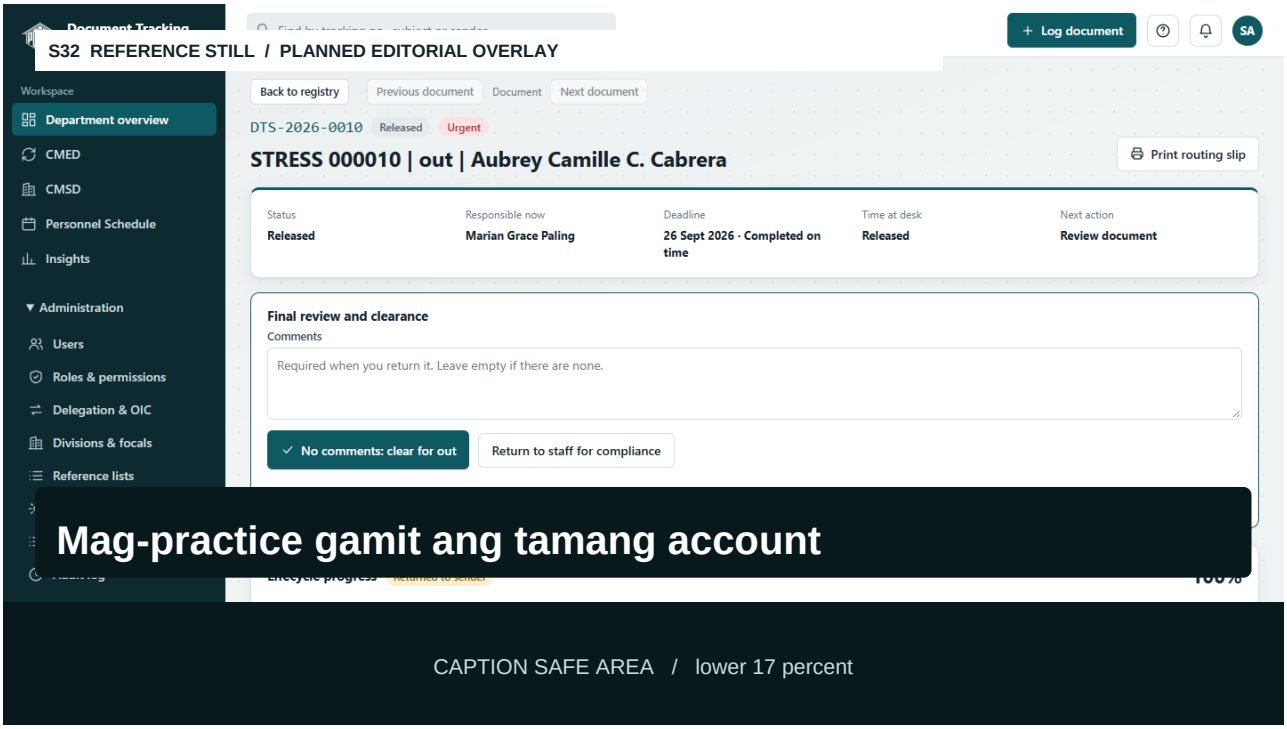

S31-3 Highlight the 30-request p95 row, zero errors, resource figures and original-data comparison.

Presenter cue p95 is not average or per-user screen time. Distinguish 30 concurrent requests from six concurrent enrolled-role browser sessions. Earlier development latency reached 3.37 seconds.

Evidence E09 | Route Port 3500 / saved report.html

S32 Recap at guided staff practice

31:00-32:00 | Closing | Presenter

Spoken narration

Balikan natin ang ordinary flow: log, forward, assign, process, review, comply kung kailangan, clear at release. Sa bawat step, may current responsibility at history na puwedeng balikan.

Para sa daily work, magsimula sa My work, i-check ang deadline at instructions, panatilihing tama ang file links, at magbigay ng malinaw na comments o compliance response. Para sa monitoring, gamitin ang filters at drilldowns bago magbigay ng conclusion.

Ang susunod nating activity ay isang guided practice sa approved test environment. Bawat role ay gagawa ng sariling step sa isang sample document. Pagkatapos, i-check natin kung tugma ang final status, recipient at movement history. Mula rito, puwede nang pag-usapan ang rollout questions at actual office procedures.

Matching screen beats

S32-1 Return to the same hero record now released; show a concise chronological path.

S32-2 Show the role-based practice checklist and the test-environment label.

S32-3 Hold a simple closing frame with the proposed next activity; leave space for questions.

Presenter cue Leave the CTA actionable and internal. Do not invent deployment dates, sponsor endorsements or a public support contact.

Evidence E01, E02, E03 | Route #/dashboard and #/action

Three minute overview

Alternate cut using the matching master scenes. Retiming follows the actual narration recording.

00:00-00:20 S01 S06

Kapag may nagtanong kung nasaan na ang isang document, puwedeng buksan ang DTS para makita ang status, current desk, deadline at movement history. Isang record ang sinusundan mula pagtanggap hanggang release.

00:20-00:40 S07 S08

Sa Admin Staff nagsisimula ang registration. Pagkatapos, ifo-forward ito sa configured Focal, na mag-aassign ng transaction, document type at responsible staff. Ang applicable processing clock ay nagsisimula sa assignment.

00:40-01:00 S10 S11

Sa My work, makikita ng staff ang assigned records. Dito bubuksan ang instructions, ilalagay ang external draft o revised file links, at isusumite ang output sa reviewer. Kapag may comments, may documented compliance cycle.

01:00-01:20 S12 S14

Dadaan ang standard example sa supervisor, division at department review. Ang clearance ay hiwalay sa actual release. Sa log out, itinatala ang recipient, releasing user at oras, habang nananatiling searchable ang history.

01:20-01:40 S15 S17 S18

Para sa reporting, may designated regional processing ng Consolidated CMR and PPR at configured recurring Special Reports. Ang automatic generation ay gumagawa ng obligation; staff pa rin ang kailangang mag-submit at kumumpleto ng review.

Three minute overview

Alternate cut using the matching master scenes. Retiming follows the actual narration recording.

01:40-02:00 S19 S20 S21

Makakatulong ang Personnel Schedule sa availability at conflict checks. Sa Analytics at Charts, puwedeng tingnan ang workload, deadlines at turnaround, saka mag-drill down sa matching records para ma-verify ang summary.

02:00-02:20 S23 S25 S27 S28

Sinusuportahan ito ng account permissions, division focals, reference lists, audit log at backup tools. Ang key actions ay chine-check ng server. Sa configuration changes, kailangang malinaw ang authority at epekto sa existing work.

02:20-02:40 S29 S31

May workflow drafting at read-only simulation; hindi pa ito generic live execution. Sa verified six-thousand-document stress run, walang HTTP request errors at about two point nine seconds ang p95 full-state latency sa thirty concurrent requests sa tested machine.

02:40-03:00 S32

Para sa staff, ang practical routine ay simple: gamitin ang sariling account, buksan ang My work, basahin ang deadline at instructions, at i-record nang tama ang bawat action. Simulan natin ang guided practice sa approved test environment.

Coverage and scene lookup

Scene	Aspect shown
S01	Ano ang kayang sagutin ng DTS
S02	Sino ang gumagamit at ano ang responsibilidad
S03	Sign in at personal workspace
S04	Pagkilala sa navigation at My work
S05	Department overview at paghahanap ng records
S06	Preview at pagbabasa ng document details
S07	Pag-log ng bagong document
S08	Forwarding at assignment ng Focal
S09	Pag-unawa sa deadlines at desk limits
S10	Staff processing at Files and links
S11	Review comments at compliance cycle
S12	Division review at clearance
S13	Reassignment at return to sender
S14	Actual release at routing slip
S15	Consolidated CMR and PPR
S16	CMED at CMSD reporting views
S17	Pag-configure ng Special Reports
S18	Generated Special Reports at review workflow
S19	Personnel Schedule para sa availability
S20	Analytics at tamang pagbasa ng metrics
S21	Charts at drilldown sa actual records
S22	Print CSV at selected outputs
S23	Users roles at division focals
S24	Delegation presence at OIC
S25	Reference lists at business rules
S26	Settings at everyday usability
S27	Audit log para sa traceability
S28	Backup restore at recovery
S29	Workflow Designer at simulation
S30	Security deployment at practical boundaries
S31	Performance proof gamit ang stress test
S32	Recap at guided staff practice

Recording checklist and staff practice

• Verify UI labels and exact configured values against the application on recording day.

• Capture a successful action, its new status and the corresponding history entry in the same take when possible.

• Use separate test examples for due-soon, due-today, overdue, completed-on-time and completed-late states.

• Keep the Workflow Designer scope label visible. Do not synthesize email notifications, direct uploads, signatures or parallel approvals.

• Check exports for selected scope and row count. Use test-only examples for restore, deactivation and destructive controls.

• Use the dated stress report for all capacity statements; p95 is not average screen-load time.

• After recording, compare all scene IDs, timecodes, subtitles and shot-list rows. Replace planning slots with actual narration and capture durations.

Guided practice

Have each enrolled role perform its assigned step on one sample document. Ask the staff member to identify the current desk, due state, available action and required input. End by checking release recipient, status and full movement history.

Discussion prompts

When does the processing clock start? What changes after clearance? How is compliance different from return to sender? Why can an Overdue Stay list contain a stalled record? What is the difference between a CSV export and a full backup? Which designer operations are live today?

Pronunciation

Spell D T S, C M E D, C M S D, C M R and P P R clearly. Read OIC as O I C. Explain p95 as the latency within which 95 percent of measured requests completed. Read working days as araw ng trabaho when a plain-language explanation helps.

Evidence and production handoff

Source locations support the factual claims and production cues. Scene-level evidence identifiers refer to this list. Recheck the current application before recording a later version.

Companion files

SCRIPT.md is the editable narration and presenter guide. STORYBOARD.md carries frame metadata. storyboard.html is the visual review sheet and links to individual presentation frames. shot-list.csv contains all 96 capture beats. showcase-plan.json carries exact text, timings, screen routes and scene-specific generation constraints. SHORT-SCRIPT.md contains the alternate overview.

Capture state

This is the script and storyboard deliverable. All 32 keyframes contain authentic reference stills captured from a disposable stress-test copy, with planned editorial overlays. Separate samples illustrate different stages; the final lifecycle recording should follow one consistent tracking number. Voice, recordings, final animation and video render are later production steps.
